## EXPLODING

The NUCLEAR WEAPONS Hoax

Akio Nakatani

*Death Object:*

*Exploding The Nuclear Weapons Hoax*

*April 27, 2017*

by *Akio Nakatani* (Author)

**Table of Contents**

<https://www.scribd.com/document/413767184/1>

<https://www.amazon.com/Death-Object-Exploding-Nuclear->

*PRODUCT INFO – Death Object Trickery is the way of war - thus has it always been.*

*But the nuclear trick is the biggest, boldest and baddest-ass scam in all of mankind's ancient and eternal quest for power and profit through mass slaughter.*

***DEATH OBJECT** takes you behind the curtain and reveals the empty sound stage.*

*The science, the history, the misery, the mystery the full hoax is covered.*

*The DOD and the security agencies all have amply-paid COINTELPRO media staff devoted to jackbooting publications that get the masses a little too "interested" for their own good.*

*They'll be on here trashing and thrashing this book within an inch of its life. Don't fall for that.*

*You may have to duck, but you don't have to let them cover you with manure.*

***DEATH OBJECT** packs more evidential meat into a couple hundred tightly reasoned pages than any existing nuclear hoax website, conspiracy forum, blog series or YouTube video. Every element of the atomic bomb scam, the founding myth of the technological age, is tied to every other, coalescing into an unanswerable exposé.*

By Anders Björkmanon

*This is a good book. Prof. Akio Nakatani has carefully checked the 1942/5 American war time scientific research and industrial developments to produce three nuclear terror bombs and concludes that*

*(1) military explosive fission producing in nano-seconds a FLASH and radiation vaporizing any observer in the vicinity and making the ground inhabitable for 500 years doesn't work and is propaganda any time,*

*(2) that Hiroshima and Nagasaki were destroyed spring 1945 by standard napalm carpet bombings, and*

*(3) that the the whole show of American a-bombs destroying Hiroshima and Nagasaki late summer August 1945 was pure propaganda to scare the shit out of normal people.*

*The towns were already destroyed, which was kept secret by Japanese and American censorship.*

**JUDGE ANNA VON REITZ:**

**FACE THE LIARS - AND THE TRUTH**

**Four Winds 10**

<http://fourwinds10.com/siterun>

**JUDGE ANNA VON REITZ**

**Thursday, April 9, 2020**

I am going to prove to you that the commercial corporations that have been serving "as" our government, are Liars. I am going to do this using one fantastically famous example. The atomic bombing of Hiroshima and Nagasaki, Japan, never happened.

This Chestnut was so widely distributed and so universally believed, that it traumatized two generations of people and

continues to haunt us today - but it is complete - and obvious - bunk.

If atomic bombs had been dropped on Hiroshima or Nagasaki, those cities would still be uninhabitable today and would remain uninhabitable for thousands of years beyond today.

*Look at what happened to Sodom and Gomorrah.*

Still desolate and abandoned. Still radioactive. Sand turned to glass eight feet under the soil surface.

THAT is the work of an atomic bomb. It takes thousands of years to decay the radioactive elements released in an atomic bomb blast. Thousands.

Look at Hiroshima and Nagasaki today, all bright and chipper, with lovely parks and war memorials. No radioactivity beyond the norm. No layer of glass underlying the cities.

*The plain and simple truth is that what was used at Hiroshima*

*and Nagasaki was a new kind of "dirty" incendiary bomb.*

Oh, it's terrible, no doubt about that - but it's not an "atomic" bomb.

The governments of the world lied through their teeth and kept right on lying, anyway. They still teach this lie in public schools all over the world.

The actual dirty incendiary bomb technology depends on

flammable and explosive metallic elements and metallic oxides. Where have we encountered that before?

Oh, the Chemtrails. Strontium, Barium, Aluminum Oxide, Thorium, Lithium, Magnesium.... its been a Who's Who of flammable and explosive metallic elements and metallic oxides pouring down out of the sky for the past thirty years, compliments of the Vatican and the Democratic Political Party.

If they couldn't have and control America as a plenary oligarchy, they were happy to burn us alive, poison the landscape and poison the food supply, and undertake other genocidal measures to express their displeasure.

So that's why we have been exposed to all this pollution -- the insane selfish will-to-power of a few nasty old men, generally summed up as the membership of The Pilgrim Society and all the Worshipful Masters, exemplified by their Drudge Queen, Nancy Pelosi.

So, face the fact that you are dealing with Liars.

And if they would lie about such a centerpiece of "world history" as the atomic bombing of Hiroshima and Nagasaki, even seven-plus decades afterward, what else do you think they have lied about?

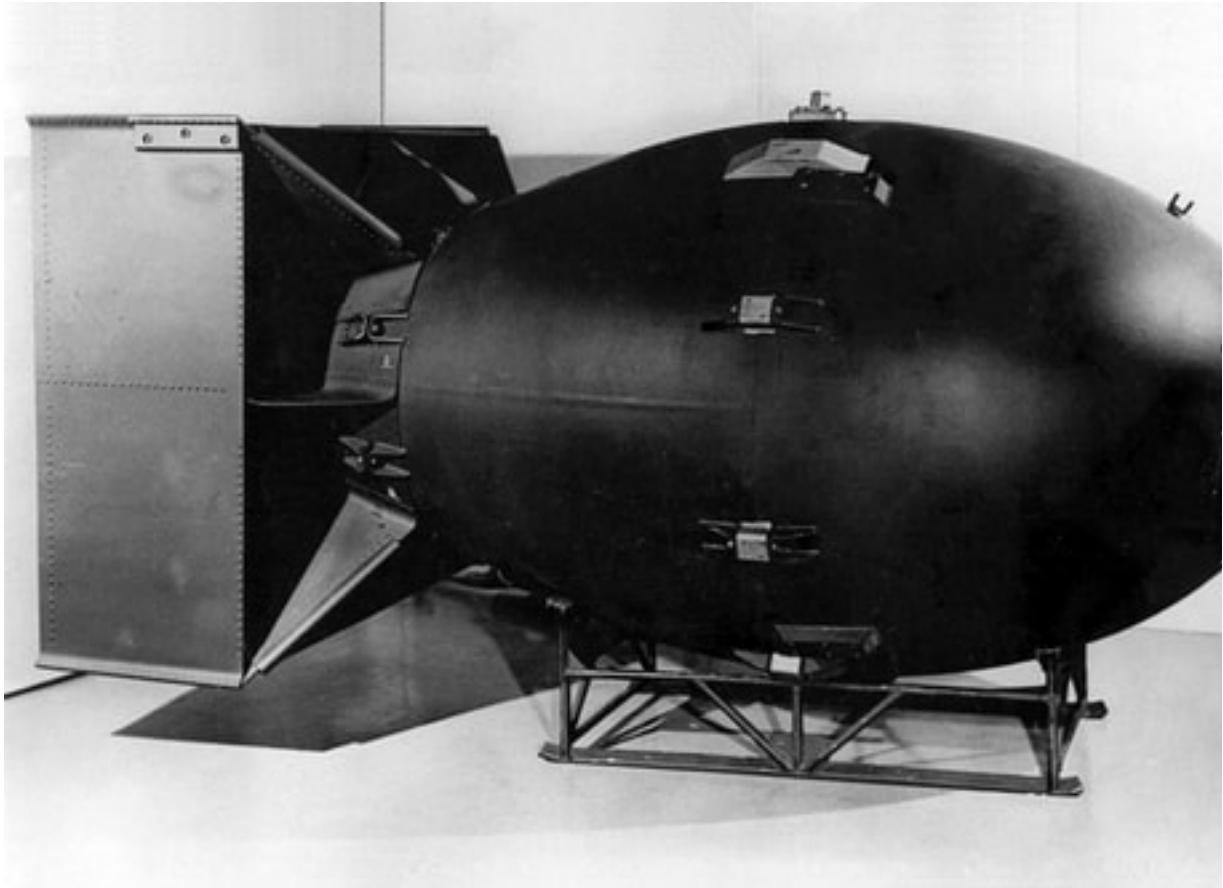

All they know how to do is lie, lie, lie, and lie some more. As I have told you all from the start, these people lie on a professional scale. They lie for fun. They lie for profit. They lie for sport. Every lie is a prayer for them in their twisted "religion" because they worship the Father of All Lies.

The Bigger the Whopper, the more powerful the prayer. Or so they think.

And this is what you left in charge of running your government, because they were in a Middleman position, and they lied to you out of one side of their mouths, and then lied about you out

of the other. At the end of the day, all lies come home. The Truth, as they say, will out.

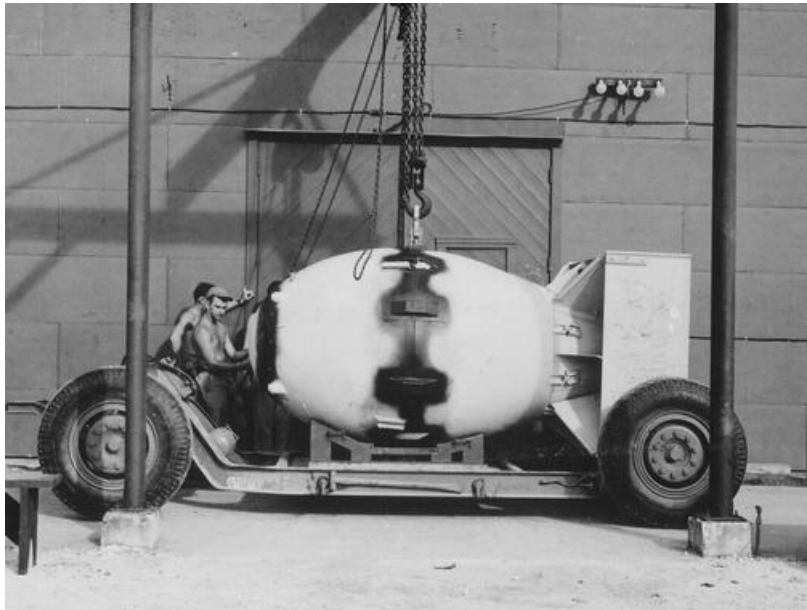

## *"The Fat Man bomb "replica"*

*Death Object: Exploding The Nuclear Weapons Hoax by **Akio Nakatani***

*Interesting fact the author of this book is Japanese – especially as they in Japan might be more aware nuclear bombs never were anything like what they were described to be.*

*Alternative media such as Big Lies & Hoaxbusters already have mentioned how some japonese individuals did not observe what has been depicted in the West during the war and the*

*"Fat man" & "Slim Boy" bombing raids...*

*"The Fat Man bomb – the “real deal”*

## *“Little boy” Replica – Above*

*allegedly dropped by a Boeing B-29 called ‘Enola Gay’ (‘Enola’ is an anagram for ‘Alone’) piloted by Colonel Paul W. Tibbets – which sounds like a fake name (reminiscent of Tibet).*

*Personally remember a “documentary” I saw as a child where they claimed people were combusted illico presto and that some of the shadows seen on Hiroshima walls was in fact people that were disintegrated by the blast... lol, sounds like a cartoon like*

*“Coyote and the Road Runner” – and it clearly is ...*

## *Nuclear Weapons!*

*<http://www.atlanteanconspiracy.com/2015/02/nuclear-weapons-do-not-exist.html>*

The following documentary explores the surprisingly abundant evidence that nuclear weapons are a hoax. Many of the nuclear explosion videos we have all seen and presumed real are shown to be complete fakes using model trees, houses and cars exploding on a set.

The destruction of Hiroshima and Nagasaki appear not to be the result of one large explosion, but rather the result of a fire-bombing campaign comparable in pictures to Tokyo's fire-bombed remains.

Hiroshima and Nagasaki also never experienced anything like the hundreds or thousands of years of radiation predicted by

nuclear scientists, in fact, vegetation began growing within a month after the bombing, and the Japanese people began rebuilding almost immediately!

Some nuclear physicists even claim nuclear weaponry fraudulent based solely on the technical impossibilities of fission material not to be incinerated before triggering the necessary nuclear chain reaction. Check out the documentary, read through [the excellent Nuke Lies Forum](#), and leave a comment what you think about this nuclear hoax.

Was the government teaching school-children to hide under their desks just to induce fear and funnel black tax money into a fake Cold War arms race?

*The Effects of Low-dose Radiation The Japanese are not alone in being exposed to low-dose radiation; **everyone is exposed to radiation daily, emanating from our food, buildings, etc.***

<https://postflaviana.org/community/index.php?threads/the-atomic-bomb-hoax.2524/>

<https://www.theatlantic.com/video/index/590299/atomic-soldiers/>

*Eric Dubai said ...*

The nuclear physicist in the video linked above says, "nuclear power plants are simply the most expensive and effective way of boiling water."

He shows Geiger counter readings in his lecture, and shows how dangerous radioactive material is by eating it! He has even swam in pools of it to show how harmless it is. Bikini Atoll is covered in the second video also if I remember right. And for Anonymous, thanks for getting a copy of the book! Let me know what you think when you finish. Many people have "seen" nukes go off, but they were also told to close their eyes, cover their ears and bury their heads in their laps while it happened.

The explosions are real, it's just that they are huge piles of layered / stacked dynamite, NOT single tiny nuclear bombs. It's shown in the videos, huge masses of TNT, not a tiny contained little bomb / missile or even more "Hollywood" are the "suitcase nukes," those take the cake!

"In Hiroshima I was prepared for radically different sights. But, to my surprise, Hiroshima looked exactly like all the other burned-out cities in Japan. There was a familiar pink blot, about two miles in diameter. It was dotted with charred trees and telephone poles.

Only one of the cities twenty bridges was down. Hiroshima's clusters of modern buildings in the downtown section stood upright. It was obvious that the blast could not have been so powerful as we had been led to believe.

It was extensive blast rather than intensive. I had heard of buildings instantly consumed by unprecedented heat. Yet here I saw the buildings structurally intact, and what is more, topped by undamaged flag poles, lightning rods, painted railings, air raid precaution signs and other comparatively fragile objects. At the T-bridge, the aiming point for the atomic bomb, I looked for the "bald spot" where everything presumably had been

vaporized in the twinkling of an eye. It wasn't there or anywhere else. I could find no traces of unusual phenomena.

What I did see was in substance a replica of Yokohama or Osaka, or the Tokyo suburbs - the familiar residue of an area of wood and brick houses razed by uncontrollable fire. Everywhere I saw the trunks of charred and leafless trees, burned and unburned chunks of wood.

The fire had been intense enough to bend and twist steel girders and to melt glass until it ran like lava - just as in other Japanese cities. The concrete buildings nearest to the center of explosion, some only a few blocks from the heart of the atom blast, showed no structural damage.

Even cornices, canopies and delicate exterior decorations were intact. Window glass was shattered, of course, but single-panel frames held firm; only window frames of two or more panels were bent and buckled. The blast impact therefore could not have been unusual." -Major Alexander Seversky.

*See 'Miles Mathis's essay wherein he proves this image and others were fakes.*

<https://ancientmystery.weebly.com/hiroshima--nagasaki.html>

# Nuclear Fission or Split

Radioactive decay. Nuclear fission can occur without *neutron* bombardment as a type of *radioactive decay*. This type of fission (called *spontaneous fission*) is rare except in a few heavy isotopes. Nuclear reaction. [https://en.wikipedia.org/wiki/Nuclear\\_fission](https://en.wikipedia.org/wiki/Nuclear_fission)

A visual representation of an induced nuclear fission event where a slow-moving neutron is absorbed by the nucleus of a

*uranium-235 atom, which fissions into two fast-moving lighter elements (fission products) and additional neutrons.*

*Most of the energy released is in the form of the kinetic velocities of the fission products and the neutrons.*

## **Nuclear *fission***

**was discovered 1938 in Germany**

*It occurs, when an atom **A** (e.g. **Uranium 235**) absorbs a free neutron **n** under controlled conditions.*

*A splits into two smaller atoms **B** and **C** that fly apart and releases two free neutrons **n**,*

*energy / heat **E** and radiation **R** as per formula:*

*The **strong forces** keeping the protons and neutrons of atom **A** together disappear producing **E** and **R**, while the two new, free neutrons **n** have problems finding other atoms **A** to continue fission. If a free neutron **n** is not absorbed by another atom **A**, it dies after ten minutes or becomes a proton and an electron and a meson.*

*The free neutrons **n** may produce more fission, but only due to moderation (slowing down!) inside a peaceful nuclear power plant/reactor (or a laboratory).*

*This **fission** has been studied in laboratories for years and is*

described in peer reviewed papers.

It takes place in nano-scale - the atoms **A** are very, very small and the neutrons **n** are even smaller and are very very fast and fission can be done by moderation in nuclear power plants.

A **fission bomb** on the other hand, otherwise known as a nuclear bomb or a-bomb, is a **fission** reactor designed to liberate as much energy **E** as rapidly as possible to kill people (!) in a nano-second, before the released energy causes the reactor and content to melt and the chain reaction to stop, we are told.

This **explosive, military fission bomb** was secretly invented 1945 by criminal pseudo-scientists / terrorists in the USA, evidently without any peer review idedor similar.

It kills people, we are told, because the two (or three), free neutrons **n** immediately, in no time, are absorbed by two or three other atoms **A** as per (1) producing four or six more atom splits, + more free neutrons **n**, etc, etc, producing billions of atom splits and new atoms **B** and **C** flying around during a nano-second releasing plenty energy/heat **E** and radiation **R** = an atomic bomb **explosion, FLASH**, radiation, shock wave, mushroom cloud killing civilians.

This - **killing people - military, nuclear physics** is totally phoney, which I explain further down. There is no evidence that it works and exists. **It cannot be and has never been tested in a laboratory of course.**

A mass of atoms **A** that fission melt at once - no explosion. There are no peer reviewed scientific papers about it anywhere. But to become a nuclear expert PhD, you must agree that **explosive, military fission** is a fact!

*It is simple!*

***Nuclear weapons cannot explode and Japan and USA keep it secret by law since 1945!***

*No military commander or political dictator can push a button, drop a nuclear bomb or launch a nuclear missile to wipe out an enemy.*

*Fantasy, secret nuclear, military weapons of mass destruction need **two** small, **non-critical** masses of fissile material like **Uranium-235** as fuel to ignite (!), when suddenly brought together to **one critical** mass according to secret nuclear, military experts.*

The **critical mass** then explodes and produces a **FLASH** that lasts nano-seconds and vaporizes and **radiates** a **mass** of children looking on and a town below a dirty mushroom cloud.

It creates **FEAR!** It is very easy to fool people with fake information to create **FEAR!** But you must avoid **spontaneous fission**:

*"Until **detonation** (ignition, explosion) is desired, a nuclear weapon must be kept **subcritical**. In the case of a uranium bomb used to destroy Hiroshima, this is achieved by keeping the fuel in a number of separate pieces, each below the critical size (mass), either because they are too small or unfavorably shaped.*

*To produce **detonation** (ignition, explosion), the pieces of pure Uranium-235 were brought together (!) rapidly. This was achieved by firing a piece of **Uranium-235** down a gun barrel onto another piece. This design is referred to as a **gun-type fission** weapon.*

*A theoretical 100% pure **Plutonium-239** weapon could also be constructed as a **gun-type** weapon ... In reality, this is impractical because even "weapons grade" **Plutonium-239** is contaminated with a small amount of **Plutonium-240**, which has a strong propensity toward spontaneous fission.*

*Because of this, a reasonably sized **gun-type** weapon would suffer nuclear reaction (the bomb would melt) before the masses of plutonium would be in a position for a full-fledged explosion to occur.*

*Instead, the **Plutonium-239** is present as a subcritical sphere (!), which may or may not be hollow. Detonation (ignition, explosion) is produced by exploding a shaped charge surrounding the sphere, increasing the **density** (!) to produce a prompt critical configuration (!). This is known as an **implosion type fission** weapon. It was used to destroy Nagasaki."*

Imagine what nonsense

the secret nuclear, military experts invented **1945!** Increasing **density!**

Of course there has been some developments of fake nuclear weapons since 1945. One example is **Fourth Generation Nuclear Weapons: Military effectiveness and collateral effects** (2008):

The paper begins with a general introduction and update to **Fourth Generation Nuclear Weapons** (FGNW), and then addresses some particularly important military aspects on which there has been only limited public discussion so far.

These aspects concern the unique military characteristics of FGNWs which make them radically different from both nuclear weapons based on previous generation nuclear explosives and from conventional weapons based on chemical-explosives, bla, bla, bla.

You wonder what idiots spend time with this nonsense. People maybe believe it today! But real **fission** does not work like that!

In a peaceful nuclear power plant **fission** takes place all the time; no **FLASH**, no smoke, no *critical* masses, no increases of densities. Steam/electricity is produced as required by *moderating* the **fission** in a **reactor vessel** using **control rods**! The **uranium fuel** is 100's of tons of **uranium oxide** molecules inside a **reactor vessel** protected by a **containment building** that slowly is transformed by **fission** into smaller molecules.

There are no *secrets*! No *plutonium* is produced when electricity is produced! It is however only 0.7% of the **uranium oxide** molecules that **fission**, i.e. those with **235** protons and neutrons in the uranium atoms. They become other atoms and waste.

The 99.3% of the uranium oxide molecules with **238** protons and neutrons in the atoms do not **fission** and become more waste. **Nuclear waste** is neither particularly hazardous nor hard to manage relative to other toxic industrial waste.

Safe methods for the final disposal of high-level *radioactive* waste inside the **reactor vessel** are technically proven; the international consensus is that geological disposal is the best option.

A key, nearly unique, characteristic of nuclear energy is that **used fuel may be reprocessed** to recover fissile and fertile materials in order to provide fresh fuel for existing and future nuclear power plants. Plutonium may be one result ... so best is not to do it. There is plenty nuclear fuel, **uranium oxide**, available at small cost. The atomic bomb fuel - uranium 235 metal - is completely different.

If an old **reactor vessel** and **containment building** are considered worn out or unsafe after say 60 years, the best solution is to build new ones at the side and not use the old

ones.

The old **containment buildings** can be used as museums or offices. Everything else at a nuclear power plant can be re-used forever. Let's face it nuclear power is the best, safest and most economical way to produce electricity.

Only twerps believe in *critical masses*, **gun type fission**, **implosion type fission**, **FLASHES**, *radiation*, mushroom clouds, **FEAR**, North Korean a-bombs and false, *secret* nuclear weapons.

Visit **Hiroshima**, **Nagasaki** or **Albuquerque**, NM, USA, and their ridiculous atomic bomb or peace museums with **photos** of cities destroyed by napalm bombings and laugh at their nonsense about nuclear *weapons* and associated *peace* (?)

This article about false / invented atomic bombs, lying atomic bomb witnesses and unsafe nuclear power plants.

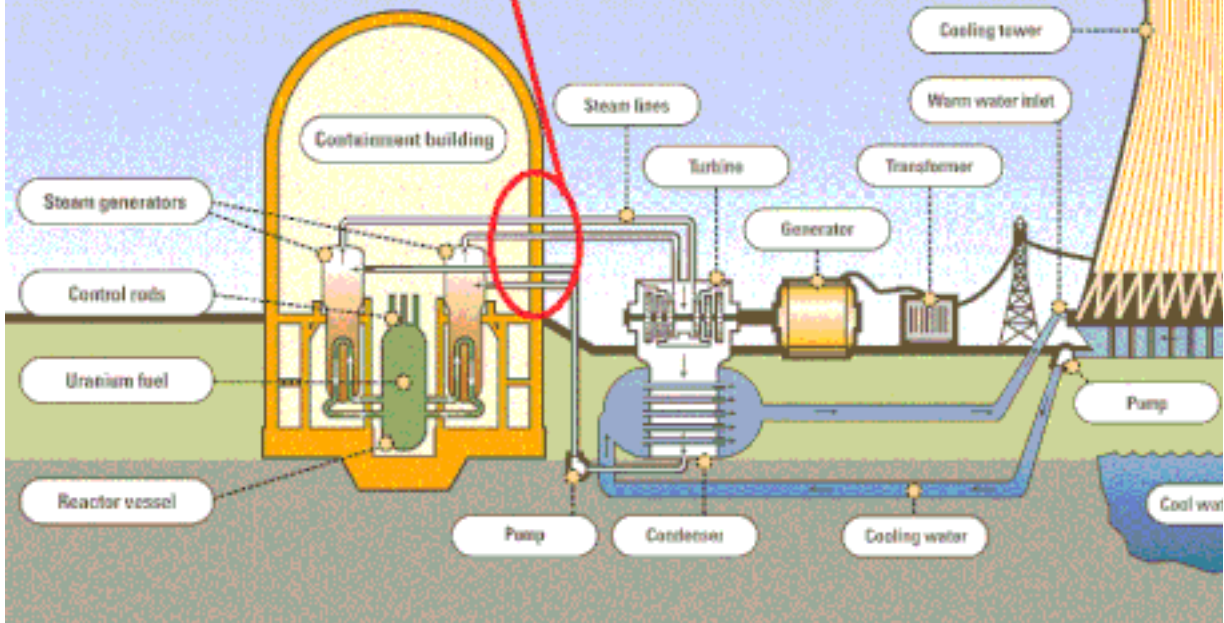

April 2019 the French **Autorite de Sûreté Nucleaire**, ASN, found welding 3 EDF Flamanville nuclear power plant **Steam lines** penetrating the **Containment building** from the **Steam generators** to the **Turbine** and back from the **Condensers** to the **Steam generators**. The welded lines had been installed and tested many times and the steam and condensed water are not radioactive. ASN now requires repairs which will delay start up of the plant a couple of years. It smells c

April 2019 the French Autorite de Sûrete Nucleaire, ASN, found welding defects in the # 3 EDF Flamanville nuclear power plant *Steam lines* penetrating the *Containment building* from the *Steam generators* to the *Turbine* and back from the *Condenser* to the *Steam generators*. The welded lines had been installed and tested many years earlier and the steam and condensed water are not radioactive. ASN now requires complete repairs which will delay start up of the plant a couple of years. It smells of corruption!

them survived***

*and 1946 new leaves budded. Radiation didn't affect the trees.*

<https://ancientmystery.weebly.com/hiroshima--nagasaki.html>

*Does this look like an atomic bomb going off in front of soviet onlookers?*

*What about the radiation killing them?*

<https://ancientmystery.weebly.com/hiroshima--nagasaki.html>

*Atomic Bomb I*

*On the below links it is hard to read.*

*See ALL the chapters on this page*

*for easy reading.*

*Atomic Bomb I - Atomic Bomb II - Atomic Bomb III -*

*Atomic Bomb IV - Atomic Bomb V. - Atomic Bomb VI. -*

*Atomic Bomb VII. - Atomic Bomb VIII*

*Atomic Bomb XI. - Atomic Bomb X. - Atomic Bomb XI*

**Today over 25236 days have passed since the first media fake propaganda about the Hiroshima atomic bomb was published by the USA during WW2.**

**Summary:** *Atomic bombs do not work and Hiroshima and Nagasaki were not destroyed by atomic bombs 1945. The Japanese towns with their simple wood/paper houses were destroyed by napalm carpet bombings. The atomic bombs were just US propaganda of false information to impress the Sovietunion.*

*But Stalin wasn't fooled. He invented/faked his own atomic bomb 1949. The 69 years old hoax from **6 August 1945** is still working kept going strong by physicists that cannot get any better jobs than lying for their governments – the only real job many physicist can get (apart from being a school teacher). Iran is trying since 30 years to fake their islamic atomic bomb*

*that Stalin did in four years.*

*The International Atomic Energy Agency, IAEA, and its boss Yukiya Amano are part of the hoax. Just ask them about it.* Welcome to my popular web page explaining why atomic bombs created by evil magicians and fools do not work, like many of the links below to other web sites promoting atomic bombs. **It seems these web sites do not like being linked to as they are just stupid propaganda.**

I, using **critical thinking**, do not understand how any intelligent, civilized human being 2014 can support atomic bombs vaporizing people! Do you?

Below is a photo/text from Hiroshima ,*ground zero*' autumn 1945 after the streets had been cleared of debris (Source: <http://gigamaster.blogspot.fr/2012/11/infographics-nuclear-explosions.html>).

It is clear to me that there was no ,*ground zero*' and that no atomic bomb exploded here and destroyed buildings, bridges, inhabitants and everything. It seems that all one or two storeys wooden/paper buildings housing people were simply burnt down by napalm carpet bombing (exactly like Yokohama May 1945 – a city I know very well) leaving steel bridges and **the external walls/roofs of all brick/concrete office buildings** intact.

It is common knowledge that 1945 central Hiroshima and Nagasaki was 95% wooden/paper houses for housing and simple stores/shops and only 5% concrete buildings, banks, insurance companies, trading companies offices, etc. And all had quite bad fire protection. The heavy industry was located outside the city centre. Killing/bombing civilians was common practice during WW2 on both sides.

So the following statement more than eight years after the alleged atomic bomb explosions, **promoted by IAEA**, by Mr. Dwight D. Eisenhower, President of the United States of America, to the 470th Plenary Meeting of the United Nations General Assembly, Tuesday, **8 December 1953**, 2:45 p.m. is a simple 60+ years old lie:

„On 16 July 1945, the United States set off the world’s biggest (sic) atomic explosion. Since that date in 1945, the United States of America has conducted **forty-two** test explosions. Atomic bombs are more than twenty-five times as powerful as the weapons with which the atomic age dawned, while hydrogen weapons are in the ranges of millions of tons of TNT equivalent.” Blah, blah! Actually, the whole speech is outrageous, very cruel, shameless, immoral, crazy, pure propaganda ... but nobody at the time objected. It is one reason why the lies are 2014 still promoted as TRUTHS.

**Here is a recent March 24, 2014, example: „Obama reportedly plays ,nuclear war game’ with world leaders at summit”**. Obama apparently loves atomic bombs vaporizing children and invites people to play nuke games with him

### *FOX NEWS CAPTION:*

**” President of European Union Council Herman Van Rompuy, Canada’s Prime Minister Stephen Harper, France’s President Francois Hollande, Britain’s Prime Minister David Cameron, U.S. President Barack Obama, Germany’s Chancellor Angela Merkel, Japan’s Prime Minister Shinzo Abe, China’s President Xi Jinping (??? – actually the Italian Prime Minister) and EU Commission President Jose Manuel Barosso (L-R, clockwise) meet during the Nuclear Security Summit in The Hague on March 24, 2014. REUTERS/POOL”**

Many people incl. the nine politicians/clowns playing nuke games in above stupid photo apparently believe atomic bombs, created by evil magicians since 1942 or so, work and can be used by *terrorists* and the reason is that they are manipulated to believe so by equally mad atomic bomb and *terrorist* supporters of USA, USSR (Russia), Great Britain and France backed up by mainstream media.

Why the European Union, Canada, Germany, Italy and Japan participate in the Obama madness is easy to grasp. You have to be politically correct and corrupt. Angela Merkel apparently has a PhD in physics and should know better but then she was also an FDJ-member and learnt to lie and cheat as a young woman.

**So: I do now understand how any *unintelligent, uncivilized* human being 2014 can support atomic bombs and nuclear war games.**

**Reason is that all atomic bombs are just rubbish propaganda. They do not work.** No atomic bombs were ever dropped on Japan 1945. It was just propaganda.

Like the French announcements that >500 French brave resistance fighter wiped out some Nazi-German regiments on the Glières plateau at Haute Savoie, April 1944. Actually the battle trained Nazis killed >150 French and lost 5 own soldiers April 26, 1944, and the French were totally defeated, etc. The *final* victors always write the history though – true or false – whatever happened.

An atomic bomb (1945) consisted allegedly of only **61 kg of Uranium 235** (61 kg is the *critical mass* – a small volume of about 3 liters of solid, heavy **Uranium 235** metal *rings* that can be carried in a bag – see below – 52 kg if a *sphere* – LOL) – that triggered by *mechanical* (sic) contact was transformed into pure *energy* (no *combustion* at all – just atoms splitting!) producing during some *nanoseconds*, because that is the time for the 61 kg of uranium atoms to fission, first a

**FLASH** (extremely bright *light* travelling at the speed of light blinding any viewers), then

**HEAT** (very *high temperature*  $>1\ 000\ 000^{\circ}$  K of the environment/air vaporizing same viewers and heating up the air so it glows), followed by a

**SHOCK WAVE** (*air pressure increase*  $>1\ 000$  bar that blows away the remains of the vaporized viewers), and deadly

**RADIATION** (*electromagnetic microwaves* frying the body cells of the non-vaporized viewers further away) and much, much later a dirty, hot

**MUSHROOM CLOUD** rising slowly up 20 000 meters from the vaporized **Ground Zero** that can be photographed (photoshopped).

That's all! All energy becomes light, high temperature, high pressure, electromagnetic waves and a mushroom cloud.

**Nonsense of course.**

There is no scientific, peer reviewed evidence that it can happen. All is military top secret. However, uncontrolled fission of atoms just produces heat that melts the surrounding that prevents further fission. Nuclear power plants have suffered it.

Any atomic bomb would just melt before exploding.

**All films of atomic bomb explosions** I have seen do not always show the light **FLASH**. We only see a lot of smoke/dark hot air (??) formed and later a **MUSHROOM CLOUD** rising in the sky. I have never seen a film or photo showing the vaporized results of the enormous high temperature **HEAT**.

Only normal fire damages. Or results of the high pressure **SHOCK WAVE**. Just structural deformations due to fire and gravity forces. And I have never seen any plants, trees

or animals damaged by evil electromagnetic **RADIATION**.  
Actually most footage of atomic bomb explosions is very low  
quality. That's why I conclude the atomic bomb is a hoax.

*Prove me wrong about two other hoaxes  
and earn €1M!*

I am serious.

The atomic bombs of Hiroshima and Nagasaki were just  
propaganda 1945 to end WW2 in Japan and impress the  
USSR. Fooled the world then as there was no free press  
around. Only censorship.

*Rare Films of Nuclear Bomb Tests Reveal Their True  
Power | WIRED*

*Atomic Bomb II*

***The B61 Silver Bullet atomic Bomb of 1963 – to be  
upgraded 2014 by Obama***

I live in Europe (Southern France) and today, **2014**, it seems USA, 51 years later, protect me with plenty atomic strategic and tactical **B61 Silver Bullet** atomic bombs *created* 1963 with *fixed* tail fins just rivetted to the bomb shell (see photos below) and according

to [www.nrdc.org/nuclear/euro/euro.pdf](http://www.nrdc.org/nuclear/euro/euro.pdf). It is evidently a joke. The B61 Silver Bullet atomic bomb does not work! And what a stupid name of a bomb. Silver bullet!

The **B61 Silver Bullet** bombs are stored in well-known places all over Europe, where they apparently can go off at any time ... even if they do not work.

A U.S. Air Force safety review determined in 1997 that there was a risk of accidental nuclear explosion during service of **B61 nuclear bombs** in NATO's protective aircraft shelters. (p.52 of above [link](#))

**Nobody in Europe reacted 1997! Imagine US/NATO bombs just exploding in store!**

The **B61 Silver Bullet** gravity bomb was *created* in 1963 and was built by the **Los Alamos National Laboratory, Los Alamos**, in New Mexico according US propaganda.

**Los Alamos** is a boring town in the mountains 40 minutes by car from **Santa Fe**, capital of **New Mexico**, famous for being the place where enriched **uranium U235** was and is transported in and out of the local atomic bombs factory close to schools and parks full of children. atomic **B61** bomb production engineering began there in 1965, with full production beginning in 1968 following a series of creative development problems. Luckily no bombs exploded in **Los Alamos**.

Total production of all versions of the **B61 Silver Bullet** atomic bomb was approximately **3 155**, of which approximately **1**

**925** remained in service as of 2002. Where the other **1 230** bombs are is a **MILITARY SECRET** due to national security considerations. Maybe they have gone missing or were stolen by locals from **Los Alamos**?

2012 there seems to be only 400 **B61**s left:

„The **B61** is about to undergo a major overhaul that the Pentagon estimates will cost up to \$10 billion, or \$25 million per bomb”.

### **NATIONAL NUCLEAR SECURITY ADMINISTRATION**

The U.S. intends to refurbish the remaining 400 **B61** atomic bombs under its Life Extension Program with the intention that the weapons should remain operational until at least 2025:

There are nearly 200 B61 Silver Bullet atomic Bombs in Europe (file photo) – note the fixed tail fins just attached to the end! It will cost USD *one* billions to make them controllable for improved accuracy when dropping on the enemy in order to better protect Europe!

No bomb works though! Imagine that! *The bomb tail fins direct the bomb, while dropping from a warplane – a top secret system! See also below about the new tail fins.*

**An old B61 Silver Bullet atomic Bomb without tail fins being rolled around by some fat US soldiers (or actors?) at Amarillo, Texas, between other B61 atomic bombs. The bomb weighs 320 kg incl. 61 kg of Uranium 235 (*critical mass*) compared to 4 400 kg incl. 61 kg of metal Uranium 235 (*critical mass*) rings of the Hiroshima bomb 1945.**

**A B61 Mod 11 weighs 540 kg for unknown reasons. Any B61, with or without tail fins, doesn't work, though! Imagine that! **Where the parachute retarder is located is unclear but probably below the tail fins aft.** The **B61 Mod****

**12 is available 2014. Only fools believe it works.**

„According to **newly published figures**, the United States will (2013) set aside **more than US\$ 10 billion** for a life extension program for the **B61 Silver Bullet atomic bombs** and another USD one billion for **adding controllable tail fins**.

The plan to give new tail fins to nearly **200 B61 gravity bombs** stored in Belgium, the Netherlands, Germany, Italy and **Turkey** would give them new mission and new capabilities. The bombs could be delivered by stealth F35 fighter-bombers.”

Evidently the extremely expensive **B61 Silver Bullet** tactical atomic bomb does not work at all, as explained below. Nobody can say on whom the high cost tactical atomic bomb shall be dropped by a plane, Hiroshima gravity style. National security! Isn't it stupid? The cigar shaped **Silver bullet** 1960's design is aerodynamically stupid; the tail fins are located in the turbulent area of the narrow end and will never be effective.

The bomb is accurately dropped from a US stealth F35 fighter-bomber on the enemy target (we shall believe) but at what speed and at what altitude is not clear? **That the \$1B tail fins control system knows where the enemy target is while the bomb is dropping, is of course 100% obviously stupid propaganda created by US military idiots.** Not even the F35 pilots can believe the rubbish.

## *Atomic bomb with Parachute Retarder*

Most versions of the old **B61 Silver Bullet** are equipped with a parachute retarder (currently a 24-ft (7.3 m) diameter nylon/Kevlar chute) to slow the weapon in its descent from release altitude. This offers the aircraft a chance to escape the blast, or allows the weapon to survive impact with the ground in laydown mode ... we are told.

**How US\$ 10 billion controllable tail fins and a parachute**

retarder work on a B61 Silver Bullet atomic bomb is a **MILITARY NATIONAL SECRET ... but improvements, increased accuracy.**

## **Increased Accuracy of US atomic Bombs after 50 years Service by Obama**

Mad **Ms Madelyn R. Creedon** asking Congress for \$10 billion to upgrade non-working scrap and plenty 1960's electronics

Ms **Madelyn R. Creedon**, the US assistant secretary of atomic war for global strategic affairs (whatever that can be? – propaganda?) suggested October 30, 2013 that:

„a key component of the life extension program is the replacement of an expensive parachute system with a newly designed tail assembly, which will increase the B61's **accuracy**.

And with increased accuracy comes the ability to decrease the weapon's yield without reducing its capabilities”.

It is good, creative news. The parachute is replaced by a new tail! Finally after only 50 years in service the **B61 Model 12** atomic bomb can be dropped **accurately**. But on what? It cannot be said. National security!

**This very creative 27 minutes film describes all secrets of the B61 bomb!**

At 11.26 in the movie a bomb is *accurately* dropped in the laydown mode by a fighter bomber. Admire all 1960's electronics that do not need replacement 2014. It is a good laugh.

I have tried to contact **Madelyn** at US DoD for more details about the B61 improvements – who will design, manufacture and test the new tail fins and **can I attend a real atomic explosion test of a B61**, etc., but **Madelyn** has no telephone

or email. I have only reached Madelyn's atomic bomb secretary Ms. **Cynthia O. Smith** at [cynthia.o.smith.civ@mail.mil](mailto:cynthia.o.smith.civ@mail.mil), who kindly advises that Anders, Unfortunately, you'll need to go through me (Cynthia O. Smith) to get to her (Madelyn R. Creedon).

You can send me your email and I will forward it to her or you can send a snail mail letter.

Many thanks

I have evidently sent my email to Madelyn via Cynthia but then I get no answers from US DoD via her. Try yourself! Madelyn apparently relies on snail mail.

Someone told me (13 December 2013) to send my questions to: **Ms. Madelyn R. Creedon, Assistant Secretary of atomic War for Global Strategic Affairs 2900 War Pentagon, Rm. 3C852A, Washington, DC 20301-2900, USA**

Of course I have done that ... no reply! Imagine old, haggard Madelyn upgrading atomic bombs! Why can't USA use some good looking lady, e.g. Paris Hilton?

„The new tail kit assembly (seen on photo right) is important because it adds a guidance system to the bomb, basically converting it from a gravity-dependent dumb (sic) bomb into a smart one that can be aimed more precisely at a target”,

the **Albuquerque Journal** reported 18 May 2014. Imagine that for 50 years US had dumb atomic bombs without guidance system.

B61 atomic bomb with new US\$ 25 million tail kit (without parachute retarder) at wind tunnel test. What a stupid joke! Can anybody believe the new tail fins can guide anything?

## *The B61 Bomb will vaporize the Plane dropping it – does Obama know?*

If the **B61** bomb is dropped by gravity from 50 meters altitude by a US war plane on the enemy target, it will hit ground with a *vertical* velocity of **31.34 m/s** after only 3.19 seconds (ignoring friction/turbulence that slows down the bomb a little). There is no engine driving the B61. Only its momentum, when released from the plane, drives the bomb when it drops down by gravity.

If the plane + bomb have a *horizontal* velocity of **100 m/s**, the plane will proceed 319 meters, while the bomb is dropping *vertically* 50 meters while also moving forward at same speed. US\$ 1 billion controllable tail fins (+ US\$ 10 billion general upgrade) may of course divert the B61 bomb accurately sideways (and downwards – not upwards because it will then collide with the plane) a little during the vertical drop but during a maximum 319 meters path.

After that the atomic bomb hits the ground at great velocity, say, **104.78 m/s** at angle **17.4°** ... and maybe bounces upwards. If the atomic bomb then explodes, when hitting ground, the plane + pilot above will evidently be vaporized like the children at Hiroshima, as the atomic bomb fire ball and blast/heat wave extends >300 meters within 0.01 seconds!

It seems **US Department of War** and **Ms. Madelyn R. Creedon** are fucking up, again. Luckily the gravity atomic bomb does not work, though, as described below. And there are no planes that can drop the 2014 model **B61-12 atomic gravity bomb**:

Initially the old NATO F-16A/B and Tornado PA-200 aircraft that currently serve in the nuclear strike mission will not be able to make use of the increased accuracy of the B61-12, according to U.S. Air Force officials.

The reason is that the aircraft computers are not capable of

„talking to” the new digital bomb. As a result, the guided tail kit on the B61-12 for **Belgian, Dutch, German,**

**Italian** and **Turkish** F-16s and Tornados will initially be „locked” as a „dumb” bomb. Once these countries transition to the F-35 aircraft, however, the enhanced targeting capability will become operational also in these countries.

Of course there are plenty US intercontinental ballistic atomic bomb missiles too controlled by **drunk generals** like Michael Carey. It is OK. They do not work either.

The US public evidently does not care about costs – **US\$ 11 billion for life extension** and tail fins improvements for better accuracy of something built in the 1960’s that doesn’t work is of no concern to the US public. US\$ 11 billion keeps a lot of idle US military busy though planning ... what ... terrorism ... controllable tail fins?

It would cost only US\$ 1 000:- to dismantle a **B61 Silver Bullet** and ship it back to USA but it seems US national security will suffer. But, blah, blah, blah:

„We’ve worked with CAPE to study how we meet the requirements for the B61 while ensuring that we’re being responsible stewards of taxpayer dollars. We’re currently doing the required engineering and design work on the B61 which will allow us to make key decisions that we can then use to inform a well researched and validated cost baseline.

All of the information we’ve gathered, including the CAPE study, will help us check any final conclusions against a long list of variables so that we’re certain we have a cost baseline that is as accurate as possible.” **Josh McConaha, National Nuclear Security Administration** (4 Nov. 2012)

**Popular media** has not caught on, at all! It loves to promote created atomic bombs and national security and does not understand that it is fooled by the military and mad **Ms**

**Madelyn R. Creedon.** Madelyn does not like my 80 kg atomic bomb carried in a bag!

As **Paul Craig Roberts** says:

„**National security** is where the executive branch hides its crimes against law, both domestic and international, its crimes against the Constitution, its crimes against innocent citizens both at home and abroad and its secret agendas that it knows that the American public would never support.„**National security**” is the cloak that the executive branch uses to make certain that the US government is unaccountable.

Without accountable government there is no civil liberty and no democracy except for the sham voting that existed in the Soviet Union and now exists in the US.”

### **The US War on Terror 2014 – lost by Obama.**

USA was November 2013 going bankrupt in its war on terror! **Forbes** reports that **one million** US soldiers have been injured in the Iraq and Afghanistan wars at tremendous costs ... and little has been won. **RT** reports that the cost of keeping each US soldier and there are plenty in Afghanistan has risen from \$1.3 million per soldier to \$2.1 million per soldier ... and that the war is lost. Matthew J. Nasuti reports in the **Kabul Press** that it costs US taxpayers \$50 million to kill one Taliban soldier.

That means it will cost \$1 billion to kill 20 Taliban fighters. Of course that cost is included in the cost of keeping US soldiers in Afghanistan. Plenty of that money ends up in Afghan president Karzai's pockets. Karzai will be murdered sooner or later and his pockets will be emptied. 2014 does not look bright. **The US war in Afghanistan** is lost 2014. And Obama didn't use his atomic bombs ... because they never worked.

Please, study below, really good news about the US military atomic nuclear madelynness.

<https://ancientmystery.weebly.com/hiroshima--nagasaki.html>

## *Atomic Bomb III*

*Manne Siegbahn,  
1924 Nobel prize (physics) winner*

## *Manne Siegbahn, 1924 Nobel prize (physics) winner.*

<http://heiwaco.tripod.com/bomb.htm>

**Manne Siegbahn, 1924 Nobel prize (physics) winner and close friend of my grandfather was 1945 asked to become head of the Swedish military research agency, FOA, to, i.a., develop a Swedish atomic bomb. Siegbahn suggested that, if all *scientific* research of FOA immediately became public and subject to independent peer review, he would consider the offer.**

**The Swedish social democratic government did not like that at all. So Manne continued doing peaceful physics research with his cyclotron instead but didn't really recommend physics or working as a physicist as a career (mostly low paid teacher jobs). So I became a naval architect instead 1965-1969. Thanks, Manne, for your advice!**

Of course there are idiots suggesting something like:

### **7.4.6 Sweden**

During the 50s and 60s Sweden developed considerable nuclear expertise – developing reactor technology and building nuclear power plants. Sweden seriously investigated nuclear weapons from the mid 1950s into the 1960s.

**A very substantial research effort into the fundamental technical issues of weapon design and manufacture was conducted.** By the mid-1960s this effort had supplied sufficient knowledge to allow Sweden to begin immediate manufacture of fairly sophisticated fission weapons. Faced with this decision, Sweden decided not to pursue a weapon production program.

You wonder what clowns write this nonsense.

**Sweden just found that fission weapons do not work. But it had to remain secret. If you leaked the good news you ... got problems. To be politically correct and NEUTRAL you cannot say the SUPERPOWERS and little France play stupid games.**

If anybody can find a public, Swedish or any country scientific, peer reviewed paper 1945-2014 that and/or how an atomic bomb works, pls tell me. I have not found any. It is all secret! You wonder what universities or institutes of technology teach young people to become atomic bomb engineers. Any ideas?

Imagine your job is design and manufacture a military bomb that – a single problem – can only kill old people and children and destroy their poor homes ... and you do it. Evidently you are mentally sick, unstable and crazy. Like William L. Laurence:

It is a thing of beauty to behold, this „gadget.” In its design went millions of man-hours of what is without a doubt the most concentrated intellectual effort in history. Never before had so much brain-power been focused on a single problem. **William L. Laurence** 1945

**This also includes 2014 e.g. hysterical Physics Forums:**

**Physics Forums** values quality, civil and productive scientific discussion. We welcome all who believe in these values except **Anders Björkman**.

If anybody links to Anders Björkman's web page

**„The atomic bomb hoax 1945-2014” at Physics Forums**, then that person is banned for life at **Physics Forums** that believes in working atomic bombs and rules that the subject cannot be discussed at **Physics Forums** for obvious reasons! On the other hand the fake **Higg's particle** can be discussed at **Physics Forums**.

The **People's Republic of China**, PRC, has joined the above

group of crazy, mad fools. The PRC submarine fleet is reportedly the world's second-largest, with about 70 vessels. About 10 are nuclear-powered, and four or more of those are nuclear powered ballistic (sic) submarines capable of launching missiles with atomic warheads. I am happy to report that none of the atomic warheads works.

All military or civilian atomic bomb supporters are twirps or contemptible persons in my opinion. Religion is said to make good people do evil things. To make intelligent people create stupid things, it takes atomic bomb development, engineering and manufacture protected by military and national security ... and good salaries. All paid for by tax payers. One result is Albuquerque, NM, a dump in the New Mexico desert and capital of the useless atomic bomb.

### **How to be politically correct – support atomic bombs vaporizing children**

6 August 2014, the *working* atomic bombs (that can explode) delusion was only 69 years old. What started as a simple propaganda gimmick to finish WW2 in Japan is still believed by billions of people 2014. Evidently there exist plenty atomic bombs. But none works. But to be *politically correct* anywhere you have to agree that the atomic bomb works.

I am evidently not *politically correct*. I don't like to lie, cheat and be dishonest that you have to do to be *politically correct*.

*An Atomic Bomb Does Not Work.*

*An atomic bomb does not work because a nuclear exponential chain reaction of uranium 235, U235, resulting in sudden release of pure energy is not possible and against the Laws of Nature.*

## *Explained Here Below*

There were 61 kg (*critical mass of a slab of uranium 235, U235, metal*) or about  $4 \times 10^{26}$  or 400 000 000 000 000 000 000 000 uranium-235 (U235) atoms, we were told, in the very heavy 4 400 (!) kg Hiroshima atomic bomb 1945 (equivalent to 15 kilo ton of TNT), i.e. only 1.4% of the atomic bomb was material that could explode, but only 1.5% of the 1.4% or 600 000 000 000 000 000 000 U235 atoms actually fissioned or split releasing energy (equivalent to 15 kilo ton of TNT exploding), when the bomb allegedly exploded and released pure energy (and not gas of burnt TNT).

Read below of further details of the very, very heavy, US atomic bomb with only 61 kg U235 inside and how it allegedly exploded 6 August 1945 and killed mostly civilians and children and destroyed little of military value.

You only need 61 kg of Uranium 235 to destroy Hiroshima and it is easily accomplished. Will it work? Evidently not.

It is suggested that total 600 000 000 000 000 000 000 000 U235 atoms in the 1945 US created bomb during some nano-seconds split exponentially 1, 2, 4, 8, 16, 32, 64, 128 (or 1, 3, 9, 27, 81, 243 ...) ... ~300 000 000 000 000 000 000 U235 atoms into ~1 200 000 000 000 000 000 000 other, smaller atoms (fractions) by free, evil neutrons flying around at the speed of light and in

the process released pure energy producing a *flash* and then a *blast/heat wave* killing children and others and destroying all houses at Hiroshima except some – see below.

And that the free neutrons missed 98.5% of the U235 atoms leaving 394 000 000 000 000 000 000 000 U235 atoms in the bomb not fissioned.

*All is fantasy!*

Prof. Hellman of Stanford University also explains the above in a recent **hand-out** for his atomic bomb design students but ***it is just stupid nonsense*** to keep his bosses quiet.

[https://ee.stanford.edu/~hellman/sts152\\_02/handout02.pdf](https://ee.stanford.edu/~hellman/sts152_02/handout02.pdf)

More nonsense is the *neutron mirror*! In order to reduce the number of free neutrons flying away missing the action we are told that latest atomic bombs are fitted with a mirror (!) around the critical mass of uranium or plutonium that reflects the neutrons back into action. With such a *neutron mirror* you can also reduce the critical mass, it is suggested. But it is all nonsense.

Any nuclear chain reaction or **fission** must be *moderated* like in a peaceful nuclear power reactor. It is the simple reason why USA, its Department of War and **Charles A. Willoughby** created the exponential, chain-reaction atom splitting atomic bombs 1945 to impress friends and foes.

Other web articles by me about clever and funny US propaganda are:

(1) **Why NASA space (Moon) travel 1969-2013 is not possible** (it is just more US propaganda that astronauts can fly to the Moon) and

(2) **Why skyscrapers (like WTC1&2 at NY 2001) do not collapse from top down** (only terrorists believe so in New York City).

***Imagine how many times we have been fooled by propaganda.***

## ***Atomic Bomb IV***

***<https://ancientmystery.weebly.com/hiroshima--nagasaki.html>***

***Introduction – just **Propaganda** to scare you***

Many people today, 2014, apart from **being afraid of terrorists**, are also curious how a military, atomic bomb functions.

**I am happy to inform that atomic bombs do not function at all and are nothing to fear!**

It is evidently a military secret that military atomic bombs do not function, but I am not a professional military. I have of course done military service and learnt how to kill ... enemy soldiers. But not civilians. I am not a terrorist.

I am a structural engineer and naval architect but with good knowledge of physics. **Below** I explain why military, atomic bombs used by terrorists do not work. Media (newspapers, radio, TV, Hollywood, etc.) will never tell you this, because it seems media is under some sort of military or terrorist control. It was very easy to fool the US public 1945 and is still easier today 2013.

Take an isolated school building and a fake fire brigade station and **fake a terror show**. Americans believe anything shown on TV or printed in newspapers and repeated by politicians.

We are all told at school or reading books or learn one way or another, e.g. from the **Trinity atomic Web Site** (no pictures), that a *first* atomic bomb – a **Weapon of Mass Destruction, WMD** – was dropped by US Air Force terrorists on **Hiroshima** (plenty pictures), Japan, in the morning of August 6, 1945, to end the 2nd World war.

**A terrorist kills innocent civilians in lieu of military soldiers.** A *second* atomic bomb was dropped on a poor suburb of Nagasaki a few days later by the same terrorists to really stop the war. BBC suggests it happened like **this! Oliver Stone** also believes in the terror atomic bomb and should study this article. **North Korea** thinks it also can explode an atomic bomb 2013 (1 000 m below surface) – but it is also just nice propaganda – and keeps the North Korean nomenklatura

terrorists in power.

Western propaganda media copies it at once without thinking, of course. Western media loves the atomic bomb dropped on civilians by terrorists.

*„The US decision to drop atomic bombs on Hiroshima and Nagasaki in 1945 was meant to kick-start the Cold War rather than end the Second World War, according to two nuclear historians who say they have new evidence backing the controversial theory.“*

### ***New Scientist***

*„A lie gets halfway around the world before the truth has a chance to get its pants on.“*

### **Winston Churchill 1945**

*“Additional fire raids of B-29’s would have been more destructive of life and property – this deliberate, premeditated destruction was our least abhorrent choice.”*

### **Henry Stimson, 1947**

*„Look at Afghanistan. In more than ten years, the armed forces of the United States and their puppet „coalition partners” have been unable to defeat a rag-tag people’s army of cave-dwellers and primitive tribesmen armed with weaponry less effective than was used in World War I (no tanks, no planes, no heavy artillery, no poison gas and so on), in a land-locked country which receives no significant outside assistance.*

*When the Executive Department of the General Government declares, as it has today, that nameless, faceless bureaucrats can order the assassinations of Americans, anywhere in the world, on the basis of the mere suspicion that the targets are somehow allied with „terrorists” or other „enemies,” and no other department of the General Government or the States at*

*any level of the federal system challenges that declaration, then America has degenerated into a politically putrescent state beyond mere „authoritarianism.“*

*This condition constitutes a species of legal nihilism with which, heretofore, only monsters such as Caligula and Hitler were associated.”*

## **Edwin Vieira**

*Defense Secretary Leon Panetta said on September 11, 2012, that the United States would have about a year to take action, **if Iran decided to build a nuclear weapon.***

**Leon Panetta, CIA, FBI, i.a.,** have apparently missed this article:

In order to hide the truth about the atomic bombs USA, when occupying Japan, immediately created the Civil Censorship Detachment (CCD) within its Civil Information Section. CCD was secret. You could not even say that censorship existed in occupied Japan.

Anybody taking photos of the ruins of Hiroshima and Nagasaki and suggesting, e.g. that the two atomic bombs were fake was simply arrested and maybe executed because such suggestions disturbed public tranquility. How was it possible?

The CCD was run by United States of America's general **Charles A. Willoughby.**

If Charles had remained in Germany, where he was born 1892, he would probably have had the job of Joseph Goebbles. **Charles** apparently was a psychopath and as such suitable for US Army service. Or for Adolf Hitler?

If you today 2014 still believe in being vaporized by an atomic bomb explosion the 135 pages **US Planning Guidance for Response to a Nuclear Detonation** (June 2010) is

recommended reading. You will, e.g. learn (p 81):

„A nuclear detonation in a modern urban area would impact the medical system more than any disaster previously experienced by the nation. Large numbers of casualties with traumatic, thermal, and radiation injuries, in all possible combinations, will be seen ... The death toll will be high, but there are opportunities to save tens to hundreds of thousands of lives.”  
But do not worry too much. It is just a joke.

### **The one million °C Heat and one thousand bar Pressure Blast Wave with its positive and negative Phases**

According the paper **Blast Loading and Blast Effects on Structures – An Overview**, by T. Ngo, P. Mendis, A. Gupta & J. Ramsay, The University of Melbourne, Australia, 2007 we learn:

„An explosion is defined as a large-scale, rapid and sudden release of **energy**. ... In a nuclear explosion, **energy** is released from the formation of different atomic nuclei by the redistribution of the protons and neutrons within the interacting nuclei (sic), whereas the rapid oxidation of fuel elements (carbon and hydrogen atomics) is the main source of **energy** in the case of **chemical explosions**. ...

The detonation of a condensed high explosive generates hot gases under pressure up to 300 kilo bar and a temperature of about 3 000-4 000C°. ... The hot gas expands forcing out the volume it occupies. As a consequence, a layer of compressed air (blast wave) forms in front of this gas volume containing most of the **energy** released by the explosion.

Blast wave instantaneously increases to a value of pressure above the ambient atmospheric pressure. This is referred to as the **side-on overpressure** that decays as the shock wave expands outward from the explosion source. After a short time, the pressure behind the front may drop below the ambient pressure (Figure 1).

During such a negative phase, **a partial vacuum is created** and air is sucked in. This is also accompanied by high suction winds that carry the debris for long distances away from the explosion source”.

A *chemical explosive* is thus a compound or mixture which, upon the application of heat or shock, decomposes or rearranges with extreme rapidity, yielding much *gas* and heat. Chemical explosions normally take place at ground level and the gas forms a *mushroom cloud* rising in the sky after the explosion.

It is suggested by many *,experts’* that a nuclear explosion, **if** it really can take place, generates **pure energy** and no hot gases of a chemical explosion producing black smoke but *something else – invisible energy corresponding to 20 000 ton of TNT exploding* – heating up 1 kg of new atomics and 60 kg of unsplit uranium atomics and 4 360 kg of scrap metal making up the bomb ... and the surrounding air. No *mushroom cloud* will be produced by such an explosion high in the air ... if it can take place.

**The *pure energy* of the exploding atomic bomb, we are told, heats up and increases the pressure of the surrounding atmosphere air so it expands producing a fireball with diameter 200 meters after 0.016 seconds and a blast wave displacing outwards in the cool outside air (seen on many fake US propaganda films) at a very high velocity and with an initial pressure of a thousand bar and an initial temperature of a million °C**

Such an expanding high pressure and temperature fireball and blast wave would evidently cause more damage than a simple chemical bomb and its hot gases of rapid, local combustion of chemicals.

The atomic blast wave could not be directed – it would go off in all 360° directions – and destroy anything being hit. If the bomb goes off 600 meters up in the air, the pure energy escapes in

all directions and the energy directed towards ground will damage the ground and be absorbed by the ground. Evidently the velocity, pressure and temperature of the blast wave

are reduced with time elapsed and distance travelled.

***Nuclear detonations produced high above the ground do not create mushroom clouds!***

**US official propaganda** has a slightly different description of the devastating blast wave:

„The ... (blast) wave travelled out in all directions from the explosion. The blast effects produced were uniform, and **essentially those of conventional large high-explosive** (chemical) weapons though on a much larger scale.

Thus, instead of localized effects such as the collapse of a roof truss or wall panel, **entire buildings were crushed** or distorted as units. The blast pressure, as with high explosives,

rose **almost instantaneously** (?sic?) to a peak, declined more slowly, and then fell below atmospheric pressure for a period about three times the period during which it was above atmospheric pressure. The positive period—that during which the pressure was greater than atmospheric—was of much greater peak pressure than the succeeding, or negative phase.

Short though the positive phase was—**probably only slightly longer than a second**—it lasted longer than the positive phase of ordinary bombs. Thus the effect of the atomic bomb on buildings was usually that of a powerful push, which shoved buildings over or left them leaning, whereas high explosive (chemical) bombs strike sharply and much more briefly and tend to punch holes in walls.

**The duration was also long enough so that almost all building failures came during the positive phase.** Comparatively few evidences were found of failures of

members during the longer but less intense negative phase; window shutters blown outwards toward the explosion were very rare.”

So the peak, side-on overpressure of an atomic bomb blast may be 1 thousand bar and the blast wave travels ~100 meter in 0.016 seconds or **6 250 m/s** at the beginning according photographic evidence (see below).

The blast wave hits ground after about 0.1 second, if the bomb explodes at 600 m altitude. An area with radius 3 000 meters, like central Hiroshima, was then destroyed, blown away outwards, in less than ten seconds assuming an **average blast wave velocity of 300 m/s** during that time.

The positive phase was 1 second, the blast wave was then say 1 000 meters away, **assuming average blast wave velocity 1 000 m/s** during that time, when reduced pressure below 1 bar developed, the negative phase started, and cool air was sucked into the vacuum for say 3 seconds. That anything should remain standing and catch fire within 1 000 meters during the 4 seconds, maybe longer, passage of the blast wave and its positive and negative phase appears unlikely.

The temperature of the heat wave associated with the blast wave probably also fell from 1 million °C to 6 000°C after a second or 1 000°C after 10 seconds but still high enough to vaporize objects being in the way. The amount of energy released in the combined blast and heat wave was evidently enormous. Any office building in the vicinity would evidently ... disappear! Wiped away.

*Bank of Japan building at Rijo Dori street, Kamiya-cho, Naka ku, Hiroshima, 2013, located almost below the alleged bomb explosion 1945 and which survived the blast/heat wave.*

See the picture at <https://ancientmystery.weebly.com/hiroshima--nagasaki.html>

## *Atomic Bomb V*

***A US B-29 plane dropping napalm bombs on civilians***  
We are **told** that the Hiroshima atomic bomb was released at 0815 hours local time, from an altitude of 9 855 meters by some US terrorists in a plane named **Enola Gay**.

A Plane dropped the atomic Bomb 6 August 1945 – No

Parachute Retarder.

The plane was type **B-29** (right) that normally dropped 450 napalm fire bombs each of 10 kg (total 4 500 kg) on people, children, houses, schools and hospitals and similarly non-military targets on ground below.

About 45 fire bombs could be dropped simultaneously at 10 seconds intervals in a so called carpet bombing attack at low altitude, so 450 bombs could be dropped during one and a half minute. Imagine 400 B-29s dropping 180 000 napalm bombs in a joint attack. With luck only solid houses not being directly hit would remain standing.

Houses with rather solid roofs would not be affected – the bombs would bounce off. It had happened in Japan several times before and the result was several square kilometers of destroyed, burnt down *housing* areas in Japanese towns and only solid building standing.

Evidently this type of military attack was not suitable against small, industrial targets or even military troops. It was designed only to kill civilians of all ages. It was pure terrorism as terrorists targets innocent civilians.

Now *one* B-29 plane was converted to carry and drop only *one* atomic bomb – **alone – or Enola** – of **4 400 kg** with **61 critical mass kilograms** uranium 235 inside.

Imagine releasing *one* such heavy bomb in *one* go from a little plane. It had never been done before. How it was done is described at around 36.50 in this **propaganda video**. Admire the cheap actors playing the bomb plane crew that never existed ... like the bomb.

We are told that ...

... **57 seconds later** (no parachute retarder used), at the predetermined altitude of 600 meters, the **4 400 kg** bomb detonated directly over Shima Surgical Clinic (and close to the

Bank of Japan building) in an instant killing 75 000 civilians; the original aiming point was the Aioi Bridge, but wind blew it a little off course, we are made to believe.

The lonely bomb thus dropped 9 255 meters in **57 seconds**. Average *vertical* velocity of the bomb was thus 162.4 m/s. If start *vertical* velocity was 0 and final velocity was 324.7 m/s (almost the speed of sound), it accelerated vertically at rate 5.7 m/s or 0.58g. Air resistance apparently slowed down the bomb.

Start *horizontal* velocity was same as the plane's speed, say 100 m/s, but was reduced due to air friction, while the plane continued forward.

Say that bomb **horizontal** speed was reduced to 50 m/s after 57 seconds, then the average *horizontal* speed was 75 m/s and the bomb horizontal displacement during fall until explosion was 4 275 meters , i.e. the distance away from the target when dropping the bomb. The plane continued 5 700 meters at constant altitude.

Had the lonely bomb dropped another two seconds, it would have crashed against the ground ... and been destroyed ... and would never explode. That it actually managed to explode at 600 m altitude, while travelling at 324.7 m/s *vertical* speed and *horizontal* speed say 50 m/s after **57 seconds** fly time, is evidently just propaganda.

How to trigger a detonation at 328.5 m/s total speed at exactly the right time using 1945 technology is not clear, as it had never been done before or after. Try to Google for the answer. You'll find nothing. But 100's of websites suggest that it was just done.

Note that the Hiroshima bomb 1945 had fixed tail fins like the 200 **B61 Silver Bullet** atomic gravity bombs.

*Approximate 57 seconds Hiroshima bomb trajectory dropping down 9 255 meters while moving forward 4 275 meters. See the picture at ...*

<https://ancientmystery.weebly.com/hiroshima--nagasaki.html>

If the plane made 360 km/h or 100 m/s speed, when dropping the bomb and continued straight on, the plane would be only 9-10 km above from the explosion, i.e. 16 times further away than the Bank of Japan building below the explosion. Imagine if the bomb had exploded a little earlier. The plane would have been wiped away.

Anyway, an area of no military value with radius ~2 000 meters was wiped out by the Hiroshima lonely bomb, we are told. It is suggested a 200 meters diameter fireball was created in 0.016 seconds driving the blast wave in all directions. The blast wave then hit ground and destroyed Hiroshima and killed 75 000 persons within a second ... we are supposed to believe.

But it is just propaganda. Probably only 7 000 persons died in the napalm bombing raid lasting some hours, so most people could escape to surrounding mountains. They were just part of the US/Japan show!

*Buildings on Rijo Dori street at downtown Hiroshima apparently not being hit by an atomic blast wave.  
See picture at <https://ancientmystery.weebly.com/hiroshima--nagasaki.html>*

The atomic blast wave originating from release of *pure energy* heating up 61 kg of split and unsplit uranium atoms corresponding to 20 000 kg of TNT exploding apparently displaced in all 360° directions at great velocity, pressure and

temperature until hitting something, e.g. the ground straight below, incl. the Japan Bank buildings with their flat roofs, pushing down, or anything at the side, pushing it sideways (or the plane above pushing it upwards).

The atomic blast wave should then bounce off whatever being hit unless what was hit was vaporized. It is like a wave at sea in the interface water/air hitting a shore (or a ship). The wave bounces (or the ship bounces). Compare also a tsunami wave hitting solid land. In that case the tsunami wave first pulls away the water close to shore – the water disappears but is actually sucked away – and then a wall of water arrives – the tsunami – destroying anything in its way.

Evidently >80-90% of the energy released 600 meters above ground just went straight up into the air and did no damage at all. Not even the plane dropping the bomb was affected. A second WMD bomb was allegedly dropped late morning on a suburb of Nagasaki a few days later killing more innocent children.

There are many strange eye witness testimonies of the Hiroshima and Nagasaki atomic bombings all suggesting a bright FLASH accompanied by a rush of heat followed by a huge pressure wave and the rumbling sound of an explosion lasting a second. Some unlucky people were then vaporized!

If you are being vaporized, you cannot give testimony, of course. There are many photos of persons having being vaporized. They are just dark patches on a brighter background and how the photographer knows that it was a vaporized person is hard to understand.

Many people including children worry today 2013 a lot about that an atomic bomb will be used again and kill or vaporize innocent people in an awful terror attack. **A third ,fantasy' bomb** was also in the making 1945! Of course. Like this:

*Enriched Uranium Production ...*

*„Enriched uranium production (in USA 1945) is more difficult to summarize since there were three different enrichment processes in use that had interconnected production. The Y-12 plant calutrons also had reached maximum output early in 1945, but the amount of weapon-grade uranium this translates into varies depending on the enrichment of the feedstock.*

*Initially this was natural uranium giving a production of weapon-grade uranium of some 6 kg/month. (Imagine that – one year just to producing the uranium for another Hiroshima bomb)*

*But soon the S-50 thermal diffusion plant began feeding 0.89% enriched uranium, followed by 1.1% enriched feed from the K-25 gaseous diffusion plant. The established production process was then: thermal diffusion (to 0.89%) -> gaseous diffusion (to 1.1%) -> alpha calutron (to 20%) -> beta calutron (up to 89%).*

*Of these three plants, the K-25 plant had by far the greatest separation capacity and as it progressively came on line throughout 1945 the importance of the other plants decreased.*

*When enough stages had been added to K-25 to allow 20% enrichment, the alpha calutrons were slated to be shut down even if the war continued.*

\

”Another well known Hiroshima building located just beside the alleged atomic bomb explosion in the background – but just burnt down by napalm bombs. Notice all the trees standing bare like after a forest fire. **Most of them survived** and 1946 new leaves budded. **See the pictures below.**

Sounds convincing, n'est ce pas? You wonder what monkey was writing it? So there is nothing to worry about. No atomic terrorist bombs worked neither 1945, nor 2014. But terrorist napalm carpet bombing worked!

*Downtown Hiroshima north of Rijo Dori street 1945 and Ground Zero, where a fake atomic bomb apparently exploded at 600 m altitude and produced a big **FIREBALL** !*

*Notice the trees standing bare like after a forest fire.*

***Most of them survived** and 1946 new leaves budded. Radiation didn't affect the trees.*

## *Atomic Bomb VI*

## *Napalm Carpet Bombing Beyond Imagination*

„In the (spring and) summer of 1945, the U.S. Army Air Force carried out one of the most intense campaigns of city destruction in the history of the world. Sixty-eight (sic) cities in Japan were attacked and all of them were either partially or completely destroyed.

An estimated 1.7 million people were made homeless, 300,000 were killed, and 750,000 were wounded. ... The destruction caused by conventional (terrorist napalm carpet bombing) attacks was huge. Night after night, all summer long, (Japanese) cities would go up in smoke.” **Source**

As media did not report this *the most intense campaigns of city destruction in the history of the world*, nobody gave a damn. Hiroshima and Nagasaki were simply destroyed by similar US conventional napalm, carpet, morning 3 to 5 a.m., terror bombing raids by 300 – 400 B-29 planes taking off from Iwo Jima and other islands piloted by very young and stupid American boys dropping 1 500 tons of **Rocky Mountains Arsenal** made napalm bombs like **Tokyo**, Yokohama (29 May 1945\*), Nagoya and 90+ other Japanese cities in 1945 killing 100 000's of innocent civilians. The only purpose of the bombing campaigns was to kill innocent civilians, i.e. pure terrorism.

Photo of Hiroshima ‚ground zero‘ taken one (!) day after bombing and still burning a little.

\*„These were days that under the information and news control of the government, military and bureaucracy, the ordinary (Japanese) citizens, unaware of the real situation of the war, were forced into a blind obedience. As the frontline moved on Japanese soil and American bombings rose in intensity, both military and civilian establishments in over 100 cities were indiscriminately attacked. A great many unarmed ordinary citizens became victims.”

Or as **Saotome Katsumoto** has described it:

**Picture taken of napalm carpet bombed burnt down Tokyo on 10 March 1945 with solid concrete buildings still standing ... like Hiroshima ... SEE Picture above**

„Although Tokyo would eventually be bombed on over one hundred separate occasions, one attack in particular resulted in unprecedented human suffering: the air raid that took place in the early hours of **March 10, 1945**.

On this night, the B-29s made the heavily populated Shitamachi district of downtown Tokyo their target. Because the purpose of this raid was to demoralize the civilian population, it had several

characteristics that set it apart from previous air raids.

This was the first nighttime raid on a Japanese city, which allowed an unprecedented number of B-29s – around three hundred – to better avoid ground-to-air fire even though they flew at a relatively low altitude in order to carry out an indiscriminate carpet bombing raid. Also, one must consider the deadly nature of the bombs themselves.

Somewhere in the neighborhood of **1 700 tons of deadly napalm** incendiaries were poured into the city. The attack itself lasted less than two hours, but because the Shitamachi area was so densely covered in wooden buildings and because the flames were fanned by a seasonal north wind, everything was consumed in a raging wave of fire. In a single night, the history and fate of Tokyo were altered forever.

An estimated **1,000,000 people were left homeless**, countless numbers of civilians were injured, and **100 000 precious lives were lost.**”

The Roosevelt Hiroshima atomic bomb never existed because it didn't work.

That it worked was just **propaganda** spread by various insiders to other insiders before and after the show. Like the Nagasaki bomb.

Both Japanese towns were simply destroyed by a US, standard, napalm, carpet terror bombing by 300-400 B-29 planes raid early morning followed by single petrol bombs exploding and setting fire to a cloud of petrol mist above the towns looking like a flash ... that could be reported as an **atomic bomb**.

The Japanese houses were generally simple wooden structures that burnt down quickly. Growing trees on the other hand didn't burn so easy. And walls of concrete and brick buildings remained intact. Solid bank buildings were not even

damaged inside!

The napalm bombs were made by the US **Rocky Mountains Arsenal** area of which that today is an ecological disaster that will cost US\$ billions to clean up.

US propaganda June 8, 2013, suggests, e.g.:

„Japanese intelligence was predicting that U.S. forces might not invade for months. Soviet forces, on the other hand, could be in Japan proper in as little as 10 days. The Soviet invasion made a decision on ending the war extremely time sensitive.**Source**

Evidently Soviet forces had few ships in the Far east to invade Japan 1945. So Japan capitulated mid August 1945 and *only* USA occupied Japan until 1952. USSR and others just looked on. USA immediately created the Civil Censorship Detachment (CCD) within its Civil Information Section. CCD was secret. You could not even say that censorship existed.

Anybody in Japan taking photos of Hiroshima and Nagasaki and suggesting, e.g. that the two atomic bombs were fake was simply arrested and maybe executed because such suggestions disturbed public tranquility. How was it possible?

The CCD was run by United Stasi of America's general **Charles A. Willoughby** in pure Soviet style. **Charles** apparently was a psychopath clever to invent things and as such suitable for US (Nazi Germany, USSR ...) Army intelligence and counter-intelligence services. The propaganda lies and methods enforced by **Charles A. Willoughby** in Japan 1945-1952 are still on, of course ... 2013.

**KILLING OUR OWN – The Disaster of America's Experience with atomic Radiation** by Harvey Wasserman & Norman Solomon with Robert Alvarez & Eleanor Walters issued as a Delta Book 1982 is typical. We are told that in the 1950's young farm boys in small villages in remote areas of the

USA saw atomic bombs explode in the distance and were later contaminated and died.

Richard Rhodes has, e.g., given the definitive story of man's most awesome discovery and invention. Told in rich human, political, and scientific detail, **The Making of the atomic Bomb** is a narrative tour de force and a document with literary power commensurate with its subject:

Few great discoveries have evolved so swiftly-or have been so misunderstood. From the theoretical discussions of nuclear energy to the bright glare of Trinity, there was a span of hardly more than twenty-five years. What began as merely an interesting speculative problem in physics grew into the Manhattan Project, and then into the bomb, with frightening rapidity, while scientists known only to their peers – Szilard, Teller, Oppenheimer, Bohr, Meitner, Fermi, Lawrence, and von Neumann-stepped from their ivory towers into the limelight.

But Wasserman, Solomon and Rhodes are just copying and pasting stupid propoganda. An atomic WMD did not work 1945 or 1953 and doesn't work today. Isn't it good news? The US propoganda worked very well 1945 as the Japanese military government at the time was part of the deal.

The Japanese happily played along and announced that two atomic bombs had hit Japan ... and that Japan must surrender. And the USSR would not occupy Japan. Everybody was very happy.

Of course millions of Japanese were almost starved to death during the US military occupation 1945-1952 of Japan in order not to make trouble. American secret censorship made the rest. Historians were fooled. It works 2013.

Except **Klaus Fuchs, Julius and Ethel Rosenberg** and some others.

**Julius and Ethel Rosenberg** were convicted of conspiracy to commit espionage during a time of war and to the passing of

information about the atomic bomb (that it didn't work!) to the Soviet Union and allegedly executed 1953, actually murdered.

Or, better, were given new identities to carry on their happy lives out of the limelight?

*<https://www.history.com/topics/world-war-ii/atomic-bomb-history>*

<https://ancientmystery.weebly.com/hiroshima--nagasaki.html>

***Fake photo of imaginary  
atomic bomb explosion in the South Pacific.***

***Atomic Bomb VII***

**Klaus Fuchs** - above - was a German physicist that escaped from Nazi Germany and studied in Great Britain in the 1930's. He was 1942 persuaded to work as a civilian for the US Manhattan project to develop the atomic bomb in UK, Canada and at Los Alamos, NM, USA and to sign the declaration form

of the Official Secrets Act that provides for the protection of state secrets and official information, mainly related to national security.

Poor Fuchs could therefore not tell anybody what he was doing. Fuchs apparently soon found out that the Manhattan project was a failure ... but he could not tell anybody. National security! Crazy, wasn't it. So Klaus told the stupid secret about the atomic bomb that didn't work to some representatives of the USSR, so that they knew what was going on.

He shouldn't have done that. 1950 Fuchs was arrested and jailed, later condemned to 14 years prison for treason after a 90 minutes trial in the UK. Tough luck. 9 years later he was kicked out of UK and settled at Dresden, not far from my house at **Freiberg**.

The Fuchs' arrest and trial and the Rosenbergs' executions were clear signs to any civilian physicist in the know that atomic bombs do not work – shut up or ...

## *The Soviet Atomic Bomb*

4 to 11 February 1945 Roosevelt, Churchill and Stalin met at Yalta, USSR, to discuss how to divide the world after the defeats of Nazi-Germany and Japan. Roosevelt/Churchill indicated that they had **a little surprise** for Stalin. And the night 16/17 February central Dresden (Altstadt and Neustadt), Germany, a town of no military or industrial value was completely destroyed or burnt down by US/UK carpet napalm terror bombing raids.

The only purpose was to show Stalin what happens to countries that do not respect agreements made. The Red Army arrived at Dresden early May 1945 and could see the result of UK and US governments terrorism. There were more military industry at little Freiberg 35 kms west than at 15 times bigger Dresden but Freiberg was never bombed. **My house there** is still standing.

The US (fake) first atomic test bomb exploded in New Mexico 16 July 1945 and president Truman was informed who indicated to USSR dictator Stalin 24 July at Potsdam, Germany, that **USA had a new weapon**. Klaus Fuchs had already 1 July 1945 told his USSR spy masters about the US test of the (fake) bomb so Stalin was in the picture.

More (fake) US atomic bombs destroyed Hiroshima and Nagasaki in Japan 6 and 9 August. In reality it was the same 400 B29s piloted by young, stupid American boys 18-19 years old not having a clue where they were that had destroyed Dresden a night in February that now destroyed Hiroshima and Nagasaki during nights in August 1945. The atomic bomb flash, blah, blah, early morning was just propaganda.

Back in Moscow Stalin created 20 August 1945 a secret committee to produce a Soviet ,*atomic*' bomb, fake of course, as quickly as possible.

The committee consisted of three communist gangsters, Malenkov, Voznessenski and Zaveniaguine and three corrupt scientists, Kurtchatov, Joffé and Kapitsa. Kapitsa had already 11 October 1941 written an article in *Pravda* about how to build an atomic bomb that could wipe out a city, so it was no news.

The committee also got, 11 October, a full set of plans of the US (fake) bomb provided by Fuchs so it was just to copy and paste and ... voilà – the USSR would have its (fake) bomb at little cost. However, USSR had no (fake) uranium ore or metal to produce the (fake) bomb. To produce a fake atomic bomb you need fake uranium metal to make the hoax more realistic. And the uranium could anyway be used in peaceful, soviet, nuclear power plants.

## *Wismut AG*

A quick study revealed that Saxony/Erzgebirge in the by the USSR occupied part of Germany had plenty of old, abandoned silver mines full of uranium oxide (pechblende). USSR secret service (NKVD/KGB) thus created (1945 or 1947) a German limited company, **Wismut AG**, to pursue mining uranium in Saxony.

One problem was that 95%+ of all Saxon mines, not very deep, say average 50 meters, but long, had been closed around 1900 being emptied of all silver and that the mining equipment was medieval or 1800-style – hammer, chisel and brute human force. Germany had never mined uranium before.

Uranium ore mining therefore started 1945 with hammer and chisel and **Wismut AG** managed to produce just 10 000 kg (or ten tons!) of very low, ~0.02%, grade uranium oxide content ore **1946** that was shipped off by train to Semipalatinsk in wooden boxes to become uranium metal, which is fairly simple.

The uranium metal shall then be divided into fissionable and non-fissionable uranium and that is very complicated. The USSR (fake) bomb was being built in great secrecy by 300 000 Gulag prisoners in the vicinity. Simple calculations show that less than 2 kg **uranium-238/235** was in that Saxon ore 1946 ... but you need much, much more to build a bomb.

As explained below to, e.g., obtain 61 kg of pure **uranium-235 (U-235)** metal to make an atomic bomb, you need about 8 400 kg or 8.4 ton of uranium metal to separate the **uranium-235 (U-235)** from. And to get 8.4 ton of uranium metal you need >40 000 tons of Saxon uranium ore.

But ... hast Du mir gesehen ... very low grade uranium ore production increased in Saxony and surroundings thanks to a friend of mine working for the corrupt **Wismut AG** at Objekt 15 and otherwise and on **26 August 1949** the USSR announced that it had exploded its (fake) atomic bomb at 08.00 hrs local

time. In all secrecy, of course. Western media published the lies as truth. The cold war had started.

## *300 Stalin Prizes*

On 29 September 1949 about 300 USSR engineers and scientists received the Stalin Prize of 1st or 2nd order for the achievement to put a Soviet (fake) atomic bomb together. Imagine that, the USSR managed to build in all secrecy (or copy paste together using Fuchs' fake plans) a (fake) atomic bomb from scratch in only four years. USA thought it would take the USSR 20 years. All fake of course.

**There is no business like the fake nuke business. It goes full speed 2014! Iran and North Korea are in the lead!** Stalin was then the most powerful man in the world, he thought or dreamt. But he was just a terrorist having killed millions of civilians in USSR since 1928. Stalin was also sick, alcoholic, old and useless with no friends and didn't know what to do with his fake bomb.

To scare him 1st November 1952 United States exploded its first hydrogen bomb triggered by a small (fake) atomic bomb. It was 100 times stronger than the atomic bomb but of course 100% fake. Stalin didn't like it and died around 1 March 1953 murdered, shot, poisoned, sick or just faded away. Nobody knows how he died. Another mystery. But 1st August 1953 the USSR then tested its first hydrogen bomb, too, triggered by a small atomic bomb.

It was 10 times stronger than the US bomb! It was of course also fake but western media said it was true. The cold war was heating up. USSR never used its atomic bomb toys and USSR ceased to exist 1991.

The USSR/Stalin atomic bombs were just fake for 42 years. But the world believed that the USSR had the atomic bombs ready to drop them anywhere. Modern Russia is keeping up the illusion. Doesn't cost them much ... but why not state today it

was a hoax? Aha, Russia is still an atomic bomb power!

## *Atomic Bomb Radiation*

Over the decades the American and Japanese governments have spent more than \$100 million to **try to understand just what the radiation from the atomic bombs did** to the people of Hiroshima and Nagasaki. One interpretation is that no atomic bombs were dropped at all. Evidently during seven years of US occupation of Japan no radiation studies of Hiroshima and Nagasaki were done ... or faked. Censorship cannot do everything.

## *The French Atomic Bomb*

But didn't France governed by our famous Général explode atomic bombs 1960 and 1966, you may ask? Oui, the Général produced his first A-show February 13, 1960, in the middle of desert Sahara and 60 persons flown in witnessed it. Of course, they were all asked to close their eyes, when the bomb exploded (to protect their eyes) ... and were later shown photos/films of what they were supposed to have seen.

They were of course impressed. Same July 2, 1966, at Mururoa, a deserted island in the middle of the Pacific with the Général as host. Only (not) seen by some flown in witnesses being asked to close their eyes, etc, etc. The witnesses evidently had no reason to doubt what the Général told them. All French witnesses were proud and certain to contribute to the greatness (grandeur) of France. But the Général simply fooled them.

More good news 2012 is that the **United Nations are firmly against nuclear weapons** with a few stupid countries disagreeing. It means that the US **NNSA** does not have to carry out **stupid experiments** again with **US tax payers** footing the bill.

Imagine all nonsense about the **LGM-118 Peacekeeper**:

The LGM-118A Peacekeeper, also known as the MX missile (for Missile-eXperimental), was a land-based ICBM deployed by the United States starting in 1986. The Peacekeeper was a MIRV missile; it could carry up to 10 re-entry vehicles, each armed with a 300-kiloton W87 warhead/MK-21 RVs. A total of 50 missiles were deployed after a long and troubled development period.

As nuclear weapons do not work, imagine all money wasted (actually stolen by US Pentagon insiders) with the LGM-118 Peacekeeper.

According **Isao Hashimoto 2 053** atomic uranium or plutonium bombs or trigger devices for hydrogen bombs have exploded in the period 1945-1998. I am happy to inform it is also all propaganda! Because ...

## *Atomic Bomb VIII*

**An atomic Bomb does not work (Iran and **ISIS**, please, take Note!)**

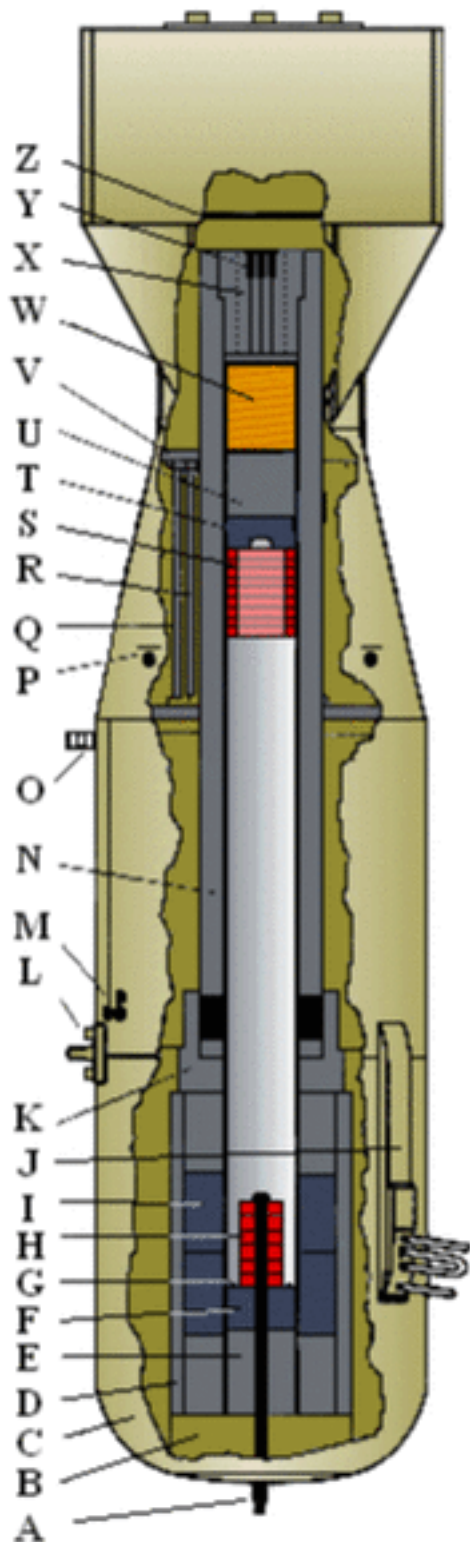

**Wikipedia** cannot explain how an atomic bomb works, so I will here explain how it doesn't work (and I will pay you €1 000 000:- if you **prove me wrong** in another matter):

We are told that the US made, 4 400 kg heavy, Hiroshima **atomic WMD bomb** called 'Little Boy' was designed as follows (the drawing is a ridiculous fake):

<https://ancientmystery.weebly.com/hiroshima--nagasaki.html>

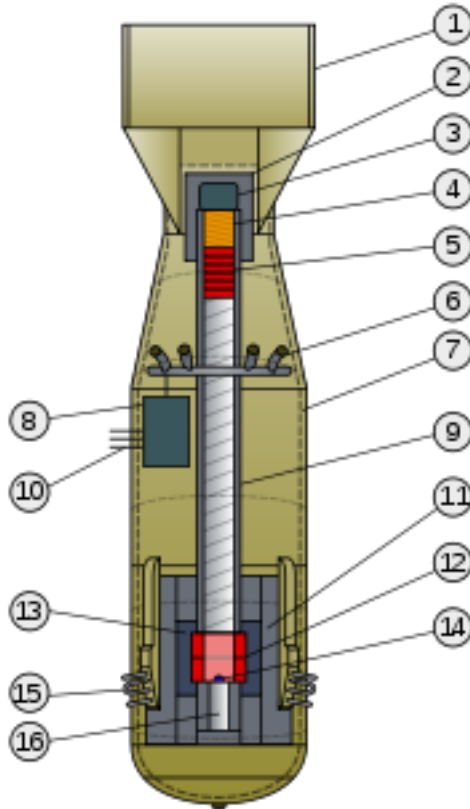

Cross-section drawing of Y-1852 Little Boy component placement. Drawing is shown in 1/2 scale. Shows quantity of identical components. Note: No clock box with pullout wires, baro switch, or electrical wiring. (John Coster-Mullen)

- Z) Armor Plate
- Y) Mark XV electric gun primers
- X) Gun breech with removable inlets
- W) Cordite powder bags (4)
- V) Gun tube reinforcing sleeve
- U) Projectile steel back
- T) Projectile Tungsten-Carbide (TC) rings (9)
- S) U-235 projectile rings (9)
- R) Alignment rod (3)
- Q) Armored tube containing primers
- P) Baro ports (8)
- O) Electrical plugs (3)
- N) 6.5" bore gun tube
- M) Safing/arming plugs (3)
- L) Lift lug
- K) Target case gun tube adapter
- J) Yagi antenna assembly (4)
- I) Four-section 13" diameter target tube
- H) U-235 target rings (6)
- G) Polonium-Beryllium initiators
- F) Tungsten-Carbide tamper plug
- E) Impact absorbing anvil
- D) K-46 steel target liner sleeve
- C) Target case forging
- B) 15" diameter steel nose plug
- A) Front nose locknut attached to target components

"Atom Bombs: The Top Secret Inside Story of Little Boy and Fat Man"  
 John Coster-Mullen drawing used with permission

*Fake drawing of 'Little Boy'*

**Anyone, incl. Iran, can build a 4 400 kg heavy atomic Bomb ... but it does not work**

So the US atomic bomb is not very complex or big – about 3 meters long with diameter 0.7 meter and mass 4 400 kg!! Anyone can build it! But it doesn't work. Full details of the physics behind the 4 400 kg is available in the top secret **Los Alamos Primer**.

Item **A** is a front nose lock nut (!! ) attached to a 1" (~2.54 cm) diameter main steel rod holding the 6 **uranium-235 metal (U-235) target rings** (item **H**) in place on top of a Tungsten-Carbide tamper plug (item **F**) and inside the 6.5"

(16.5 cm) inside diameter Tungsten-Carbide tamper cylinder sleeve (item I).

Each U-235 **target ring** weighs ~5.08 kg, i.e. all 6 **target rings** weigh together ~30.5 kg.

A **target ring** has inside diameter ~2.54 cm (1") and outside diameter ~11.8 cm (4.65") and height ~2.57 cm (1.01") and volume 268 cm<sup>3</sup> and weighs ~5.08 kg, because the density of the metal U-235 is about 18.95 g/cm<sup>3</sup>.

Total height of the 6 **target rings** is 15.4 cm (6.06").

If the front nose locknut (item A) is not secured, the **target rings** (item H) will drop off! And items B, C, F, G and I will be loose.

Item S is the 9 uranium-235 metal (U-235) **projectile rings**.

Each **projectile ring** weighs ~3.39 kg and has height 1.71 cm (0.67").

The inside diameter is ~11.8 cm (4.65") and the outside diameter is ~16.5 cm (6.5") so the **projectile rings** can slide inside the cylinder sleeve – item I and the 6.5" bore gun tube – item N. Total height of item S is 15.4 cm, i.e. same as item H. How the **projectile rings** (item S) and items T, U and W are secured inside the cylinder sleeve/gun tube and do not drop down by themselves is not clear! Nine **projectile rings** weigh ~30.5 kg.

The **target rings** and **projectile rings** have combined (*critical*) mass 61 kg and volume 3 219 cm<sup>3</sup> (a **cube of uranium-235 with side 14.77 cm**) that will ,*explode*' when pushed together. The remaining mass of the bomb – 4 339 kg – is all the other lettered items seen above.

US Army designed it VERY HEAVY 1945! Why you need 4 339 kg of scrap to push 2 times 30.5 kg of **uranium-235** together is still a military secret. National security, you know! Remember Klaus Fuchs!

Another **fake drawing** of the **VERY HEAVY** 'Little Boy' is shown right. The basic principle is the same but the details differ completely. This is normal when idiotic military hardware is used as propaganda. There is no Item A a front nose lock nut, etc.

It would evidently be much simpler to just have a 60 kg cube about 14.8\*14.8\*14.8 cm of uranium-235 with a hole where you can inject a piece of 1 kg of uranium-235 at a speed of >1 000 m/s using a little mechanical device, so it explodes, when *critical mass* 61 kg is suddenly reached.

This mechanical device incl. 61 kg uranium-235 weighs say 70 kg. Put it in a bag with weight 10 kg and you have a Björkman atomic bomb (left) that only weighs 80 kg. Imagine that a little cube of uranium-235 can explode in a little bag! Of course one 1 kg piece must be injected at a speed of >1 000 m/s into the other 60 kg piece.

Easier to handle than the stupid 4 400 kg monster allegedly used at Hiroshima.

**But you need Uranium-235 ... and it is a little complicated**

**Uranium-235 (U235)** is a *metal* and doesn't cost very much and is not rare. About 53 000 tons of **uranium** are produced annually 2012.

A friend of mine at **Freiberg, Saxony** (East Germany/DDR until 1990) worked for **Wismut AG**, 1948-1958, that produced 10 000 tons of uranium for USSR. Those were the times. **Wismut AG** was a private company (in communist DDR) 100% owned by the **KGB** (USSR secret intelligence/security agency) headed at the time by comrade Serov.

The USSR used the DDR uranium in their nuclear power plants. **KGB knew the US atomic bomb was a fake as KGB had spies everywhere in the USA fooling FBI for years.** So USSR produced their own communist atomic bomb! It didn't

cost them a kopek. It was just proletarian propaganda. It was never built. Only propaganda films and photos of fake Soviet atomic bombs were produced to impress the proletariat and put fear into the Americans.

One American, Paul Nitze, was behind the three most important reports that promoted the perception of a Soviet threat against the United States after World War II.

The first of these reports, NSC68, was instrumental in changing the policy of the Truman Administration, which initially did not perceive the Soviets as a major threat. The second Nitze report was the Gaither Report that, in 1957, said **the U.S. had fallen behind (!) the USSR in nuclear weaponry**. Didn't Nitze know that the USSR bomb was a propaganda hoax?

**Disc of U-235 made in USA! Just drill a hole and ... voilà ... a ring! Then compress it, or just drop it on the floor!? ... and BOOM!**

However **uranium-235 (U-235)** makes up only 0.72% of normal uranium metal and has to be separated from the remainder (mostly **uranium-238**) in special factories which makes **uranium-235 (U-235)** a little more expensive.

An **uranium-235 (U-235)** atomic has three neutrons less than an **uranium-238** atomic. To, e.g., obtain 61 kg of pure **uranium-235 (U-235)** metal you need about 8 400 kg or 8.4 ton of uranium to separate the **uranium-235 (U-235)** from. How to separate **uranium-235 (U-235)** from **uranium-238**?

Well, one way is, Iranian style since many years, that you treat the **uranium** with **fluorine, F**, so it becomes a gas – **UF<sub>6</sub>** – and then, in gas separators you separate the lighter **U-235 F<sub>6</sub>** molecules from the little (three neutrons) heavier **U-238 F<sub>6</sub>** molecules! And then you remove the fluorine again and have pure, metal **uranium-235 (U-235)**. Voilà!

Then you cast and machine the **target rings** and **projectile rings** of **uranium-235 (U-235)** in any workshop. **Uranium-235 (U-235)** is a metal like iron that can be shaped into **target rings** and **projectile rings**. Imagine drilling a dia 1" hole in a **target ring**. Aren't you worried it will **EXPLODE**?

It is, however 2012 – 67 years later, still **TOP SECRET**, what US factory managed to separate **U-235** from 10 tons of **U-238** by gas separation or whatever – magnetism? – and then making it, the **U-235**, a **72 kg metal slab** again and what workshop manufactured and drilled the **U-235** metal **target rings** and **projectile rings** in 1945!

Reason apparently being that no such workshop or technology existed at that time, 1942-1945, and no **rings** were ever manufactured. Of course, there was **Oak Ridge, TN**, with 75 000 people but they didn't know what they were doing.

Some people say **Clinton Engineer Works**, 20 miles west of Knoxville, TN, produced the **rings** using the **calutron electromagnetic isotope separation (EMIS) process**. Hundreds of thousands of magnetic type separators (!) driven by great amount of electricity were used by **Clinton Engineer Works** to produce some hundred kilograms of **U-235**.

Reason for so many separators was the relatively low product collection rate of the process and the long cycle time required to recover material between runs. The **rings** and the separators would otherwise be nice atomic museum show pieces! But ... it was all stupid **PROPAGANDA!**  
No **U-235** was ever produced and no separators existed!

Talking about **atomic museums** – there is **one** at Albuquerque, NM! It produces a lot of **propaganda about US nuclear bombs** and the **nonsense done nearby 1945**.

It is supported by US Congress! Imagine that – a museum full of lies supported by the US Government. 2012! But

Albuquerque is just an ugly, boring dump in the New Mexico desert with an annual hot air balloon show + plenty PhD's living in the Rio Grande gutter.

## *Atomic Bomb XI*

The first atomic bomb explosion at 5.30 am, July 16, 1945, 0.016 seconds after detonation at about 20 meters above ground. The *fireball* (?) is about 600 feet (200 m) wide.

The black specks silhouetted along the horizon are trees. The picture, allegedly taken by a high speed, 64 fps (one frame every 0.0156 seconds), B/W film camera at a distance 10 000 yard away, is a simple fake! Like this [video!](#)

Inside the fake *fireball* is *pure energy* that have heated up split and unsplit uranium atomics and the air to  $>1\ 000\ 000^{\circ}\text{C}$ . The pressure inside the *fireball* is originally  $>1\ 000\ 000$  bar, when it expands at great velocity in all directions ... if you believe the nonsens.

In this 1955 [film](#) you see a little (fake) atomic bomb go off, so next day place is safe to visit and have a look at the damages! All nuke bomb films are fake! Russian, American, French, etc.

According underpaid US scientists 1945 the atomic bomb above exploded (!), when the 9 [projectile rings](#) (item **S**) of 30.5 kg uranium-235 (**U-235**) were *mechanically* pushed over and *mechanically* compressed into (?) the 6 [target rings](#) (item **H**) also of 30.5 kg uranium-235 (**U-235**) by the projectile Tungsten-Carbide disk (item **T**) at a speed of  $>1\ 000$  m/s (according #20 of the [Los Alamos Primer](#)) and the projectile steel back (item **U**) in turn accelerated by exploding

cordite power bags (item **W**). 4 Polonium-Beryllium initiators (item **G**) on the plug crushed by the **projectile rings** apparently started the magic atomic action (LOL!)?

This took place 600 meters above ground, when the bomb itself was dropping at 324.7 m/s speed.

Why the 9 **projectile rings** did not drop by themselves by gravity is not clear. Maybe they were glued together and to the disk glued to the steel back?

So an atomic bomb is very simple! Slide or drop or push (assisted by exploding cordite!)

9 **uranium-235 (U-235) projectile rings** over 6 **uranium-235 (U-235) target rings** and compress them together inside a Tungsten-Carbide tube (sleeve/disk/plug) a speed of >1 000 m/s and **fission** and ... **BOOM**. Children died! And do not forget to tighten item A – the front nose locknut on the steel rod!

Above is evidently pure nonsense. Stupid, idiotic propaganda. It does not work! Metal in contact with metal, be it gold, silver, lead, iron, uranium of any kind incl. **uranium-235 (U-235)** of any **critical mass**, do not fission exponentially and explode (initiated by Polonium-Beryllium) even after being **mechanically** compressed together a speed of >1 000 m/s ... suddenly.

What is supposed to happen to initiate fission? The **projectile rings** and their steel back (items **T** and **U**) – say weight 50 kgs – accelerate down the 2 meters long tube in microseconds and collide with the impact absorbing anvil (item **E**) with a velocity of  $v$  – say  $v = 150$  m/s, which is pretty high (more will blow the tube apart). The total energy applied at collision impact is 562.5 kJ and half of it is absorbed by the impact absorbing anvil (item **E**) trying to push the **projectile rings** and its steel back (item **U**) back up the tube.

You know – **objects also bounce, not just compress, at**

**impacts.** The remaining energy – 281.25 kJ – is supposed to radially compress mechanically the **projectile rings** and the **target rings** (total 61 kg) and adjacent items (say also 61 kg) but 2.3 kJ/kg energy will not compress metal a lot in any direction. **Compare energy required to destroy WTC 1/2!**

You really wonder what idiot or nuclear physicist came up with this crazy idea that two pieces of cold metal (**uranium-235**) mechanically compressed together using cordite would start to fission. Would really the two cold metal pieces merge into one? What really happens at the contact surface between the **projectile rings** and the **target rings**? Do the rings become one solid mass? And why would it explode?

*The blast wave has apparently just hit ground stirring up some (fake) dust. <https://ancientmystery.weebly.com/hiroshima-->*

### **Uranium-235 only explodes if it has a **critical Mass****

The ,*experts*' have an answer to that. **Critical mass!** The **critical mass** is the smallest amount of fissile material needed for a sustained nuclear chain reaction. For **uranium-235, U-235**, the critical mass is 61 kg! If 30.5 kg of metal **U-235 projectile rings** are brought in mechanical, compressive contact with 30.5 kg of metal **U-235 target rings** they add up to **61 kg = critical mass!** A 3.39 kg **projectile ring** in contact with a 5.08 kg **target ring** does not produce fission! Why?

Because  $3.39 + 5.08 = 8.47$  kg is not a **critical mass!** On the other hand a sphere or ball of **uranium-235** with diameter 17 cm has a **critical mass of only 52 kg. Or:**

A mass may be exactly critical without being a perfect homogeneous sphere. More closely refining the shape toward a perfect sphere will make the mass supercritical. Conversely changing the shape to a less perfect sphere will decrease its reactivity and make it subcritical.

So a **52 kg sphere** of **uranium-235** is a critical mass like **61 kg** of *rings* of **uranium-235**. atomic physics is just a big laugh. Military secret, of course.

In retrospect it would have been much easier to allow two 26 kg half-spheres of **uranium-235** to collide than to play around with **projectile and target rings**.

And what damages are caused by cordite gases when the **projectile rings** or half-spheres have been pushed down the gun tube? Doesn't the whole atomic bomb assembly blow apart? LOL! OK, OK, it was never built! **It was just a joke**. Military propaganda 1945 worth US\$ 2 billion! LOL! And nuclear physicists believe it 2013.

### **But only 0.1% of a Uranium-235 atomic becomes Energy in an atomic Bomb**

But I agree. One **U-235** uranium atom may fission as discovered by Otto Hahn in the 1930's. You do not have to mechanically compress uranium metal rings in a tube for it. In a peaceful atomic power plant there is no mechanic compression of uranium atomics to keep the plant going.

When one **U-235** nucleus fissions into two lighter nuclei fragments or products (i.e. other atoms), about 0.1 percent of the mass of the uranium nucleus appears as fission **energy** of 202.5 MeV ... we are told (by some **underpaid physicist?**):

A. Typically ~169 MeV appears as the kinetic **energy** of the nuclei fragments (new atomics), which fly apart at about **3% of the speed of light**, due to Coulomb repulsion. B. An average of 2.5 (?\*) neutrons are emitted, each with a kinetic **energy** of ~**2 MeV** (total of 4.8 MeV).

C. The fission reaction also releases  $\sim 7$  MeV in prompt gamma ray photons (light).

D.  $169 + 4.8 + 7 = 180.8$ . Where does the remaining  $202.5 - 180.8 = 21.7$  MeV energy go? Or is there a simple addition error?

Regardless, this means that a nuclear fission of **one** (!) atom emits about 3.5% of its **energy** as gamma rays, less than 2.5% of its **energy** as fast neutrons (total  $\sim 6\%$ ), and the rest as **kinetic energy** of fission fragments (this appears almost immediately when the fragments impact surrounding matter, e.g. water (?\*) in an nuclear power station, as simple heat, where **the reaction is controlled** at a certain constant temperature).

(\*that half a neutron is produced in fission of one **U-235** atom is to say the least strange! The other two neutrons are supposed to immediately fission two other **U-235** atoms – chain reaction! – but the energy 2 MeV is much too small ... according same underpaid physicist! And evidently the fragments first impact surrounding **U-235** metal ... and not water or air, i.e. the **U-235** metal piece is heated up first. If there is U-238 uranium in the bomb and a free neutron collides with it, it may become radioactive plutonium 238, which is very dangerous, we are told, etc, etc. )

Note that no matter is transformed into pure energy à la Einstein here. Only one atom is split into two other atoms – fragments – and some neutrons and gamma rays and as they are moving they represent kinetic **energy**.

*However*

In an atomic bomb as described above (due to exponential chain reaction), this heat may serve to **raise the temperature**

to **100 million K** (kelvin) and cause secondary emission of soft X-rays, which convert some of this energy to ionizing radiation.

This is utter nonsense. Less temperature will simply melt the uranium **uranium-235 (U-235) metal assembly** that will flow or evaporate away. Therefore:

However in **nuclear reactors**, the fission fragment kinetic **energy** remains as low-temperature heat, which itself causes little or no ionization.

It is the speed of the neutron, when it hits the nucleus that has a lot to do with how likely a fission is to occur. One might think, intuitively, that if the neutron is going really fast that it has a better chance of “shattering” the nucleus, but that’s not really how it works. Actually, for the fissile nuclei such U-235 the **SLOWER** the neutron is going, the more probable fission is.

So slowed-down neutrons to maximize fission are an absolute requirement. And then from fission comes more neutrons, which continue the reaction. Well, mostly right. Actually, the neutrons born from fission are going really fast. Really, really fast. And they have to slow down to have a good chance of causing fission. That’s where the moderator comes in.

The moderator in a nuclear reactor is the material whose job it is to slow down neutrons without absorbing them. This slowing-down is done by neutrons bouncing off the nuclei of the atomics in the moderating material.

For most reactors, moderation takes place in the water that also cools the reactor. For a high-temperature reactor like the liquid-fluoride reactor, graphite (carbon) is used as the moderator. This was not really known in the 1940’s when the atomic bomb was said to have been invented

*Great Britain detonated its first nuclear bomb May 15, 1957 – and it looked like above ... photo by some unknown hero.*

*Doesn't the flash look ... fine, fantastic, ... fake?  
But where is the blast wave? Picture at:*

<https://ancientmystery.weebly.com/hiroshima--nagasaki.html>

It is thus the moderated free neutrons that keep the fission going in a peaceful nuclear power reactor by heating the water. The **2 MeV** kinetic energy of a free neutron becomes 0.01 MeV kinetic energy and the rest – 1.99 MeV – heats up the water. But in 1945 it was **only 1.5% of the Uranium-235 critical Mass exploded or fissioned in an atomic Bomb.**

we are told by the 1945 atomic bomb engineers and manufacturers. Fission was discovered 1939 and 1945 everything was known about it by clever scientists we are told ... but made top secret for military reasons. How convenient.

How many **U-235** nuclei are there in a 61 kg atomic bomb described above? The answer is that there are about  $4 \times 10^{26}$  **U-235** nuclei in a little, 16.5 cm diameter, 15.4 cm high, 61 kg (critical mass, LOL) **U-235** atomic bomb two parts core, i.e. quite a lot of U-235 nuclei in the metal **target rings** and **projectile rings**.

Only 1.5% of the  $4 \times 10^{26}$  U-235 nuclei, i.e.  $6 \times 10^{24}$  nuclei are, according to unproven research 1944/5, supposed to fission during a few nanoseconds to produce an atomic bomb explosion according some strange, unproven theory.

98.5% of the nuclei do not fission as the **free neutrons** miss them and fly away, we are supposed to believe. Imagine that! 98.5%. Why not 100%?

*Fake foto of fake US a-bomb explosion without blast wave above.*

So the following is supposed to happen in a **U-235** exponential chain reaction atomic explosion after two pieces of cold metal **U-235** are compressed together:

1. One metal **U-235** nucleus of total  $4 \times 10^{26}$  nuclei fissions and is split into two *fragments* of some kind at high speed (close to speed of light) and two or three **free neutrons** (also at high speed) due to mechanical compression. It is supposed this happen in the interface between the **projectile rings** and the **target rings**.
2. The two or three **free neutrons** miss 120-150 metal **U-235** nuclei in the vicinity because the nuclei are very small compared to the atomic itself but still manage to collide

with 2 or 3 **U-235** nuclei that fission in turn and split into more fragments and another 2 or 3 **U-235** nuclei that again misses 120-150 **U-235** nuclei in the vicinity but manage to collide with 2 or 3 **U-235** nuclei, and so on until only  $6 \times 10^{24}$  **U-235** nuclei (1.5% of total) have fissioned during a few nanoseconds chain reaction.

3. The temperature increases  $1\,000\,000^\circ\text{C}$  and produces a flash and the energy heats the surrounding air over several kilometers that then rises to form a mushroom cloud.

4. The pressure increases  $1\,000\,000$  bar due to pure, white or blue, invisible energy (kinetic energy of the fragments) being released forming a blast wave that destroys the surroundings (except the Bank of Japan building and similar strong buildings).

5. Above only happens if the total mass of the two cold metal pieces being mechanically compressed is **critical**.

Why a dirty mushroom cloud of any type or color or a ball of fire hanging around in the sky is supposed to develop ... except on fake footage to impress stupid onlookers ... is not really clear. Hot air ball of fire rising?

If there are **U-238** nuclei mixed with the **U-235** nuclei, the neutron may transform the former into plutonium + radiation, i.e. the **U-238** nuclei are not split into fragments but transformed into another substance.

That the fragments (heat) do not melt the  $4 \times 10^{26}$  nuclei metal core is that fission goes faster than melting, we are told, etc, etc, blah, blah.

However, when the first (and only?) nucleus of  $4 \times 10^{26}$  **U-235** nuclei in the above bomb fissions (it is split by **free neutrons** from somewhere – the Polonium-Beryllium initiators?), it will only heat the surrounding as it is not cooled and the 2.5 **free neutrons** will just fly away and produce

nothing with their 2 MeV energy each. They cannot possibly collide with and fission anything. **They must be moderated to produce further fission like in an atomic power plant.**

The  $4 \times 10^{26} - 1$  remaining nuclei in the little dia 16.5 cm, 15.4 cm tall chunk of U-235 metal **target/projectile rings** will therefore not fission further. **The bomb does not work!** It always fizzles! Unless the cordite blows the whole thing apart and some innocent bystander gets a **target ring** or **projectile ring** in the face?

## *Atomic Bomb X*

<https://ancientmystery.weebly.com/hiroshima--nagasaki.html>

## *Fission Fizzle*

**Carey Sublette**, self-appointed nuclear expert (sic), has a very stupid explanation of fission fizzle:

„Two conditions must be met before fission can be used to create powerful explosions: 1) the number of neutrons lost to fission (from non-fission producing neutron captures, or escape from the fissionable mass) must be kept low, and

2) the speed with which the chain reaction proceeds must be very fast.

A fission bomb is in a race with itself: **to successfully fission most of the material in the bomb before it blows itself apart**. The degree to which a bomb design succeeds in this race determines its efficiency. A poorly designed or malfunctioning bomb may „fizzle” and release only a tiny fraction of its potential energy.”

Apparently this is a clever design:

It was never tested anywhere and exploded when dropped on Hiroshima. It didn't fizzle ... you must believe. **W** exploded, **S** was suddenly pushed down **N** over **H** and fission occurred ... because **A** was locked tight! The **free neutrons** made the rest! But not in this bomb!

*Only Fools believe that Metal in mechanical Contact with Metal explodes.*

Only fools like Mr. **R Oppenheimer** and badly informed people like most politicians believe that **uranium-235** metal in mechanical contact with **uranium-235** metal in the shape of **target rings** or **projectile rings** ... or any metal in

mechanical contact with itself – will produce ... an atomic explosion: that  $4 \times 10^{26}$  or  $6 \times 10^{24}$  **metal U-235** nuclei in some **uranium-235 (U-235) target rings** or **projectile rings** fission exponentially in nanoseconds into fragments and release energy is just fantasy, I am happy to inform! It was a fizzle.

**Oppenheimer**, the alleged master mind of the *fake* Hiroshima bomb, apparently thought it was all a joke.

That nobody would get killed by the massive napalm carpet bombings of Hiroshima and Nagasaki. But **later propaganda** suggests otherwise:

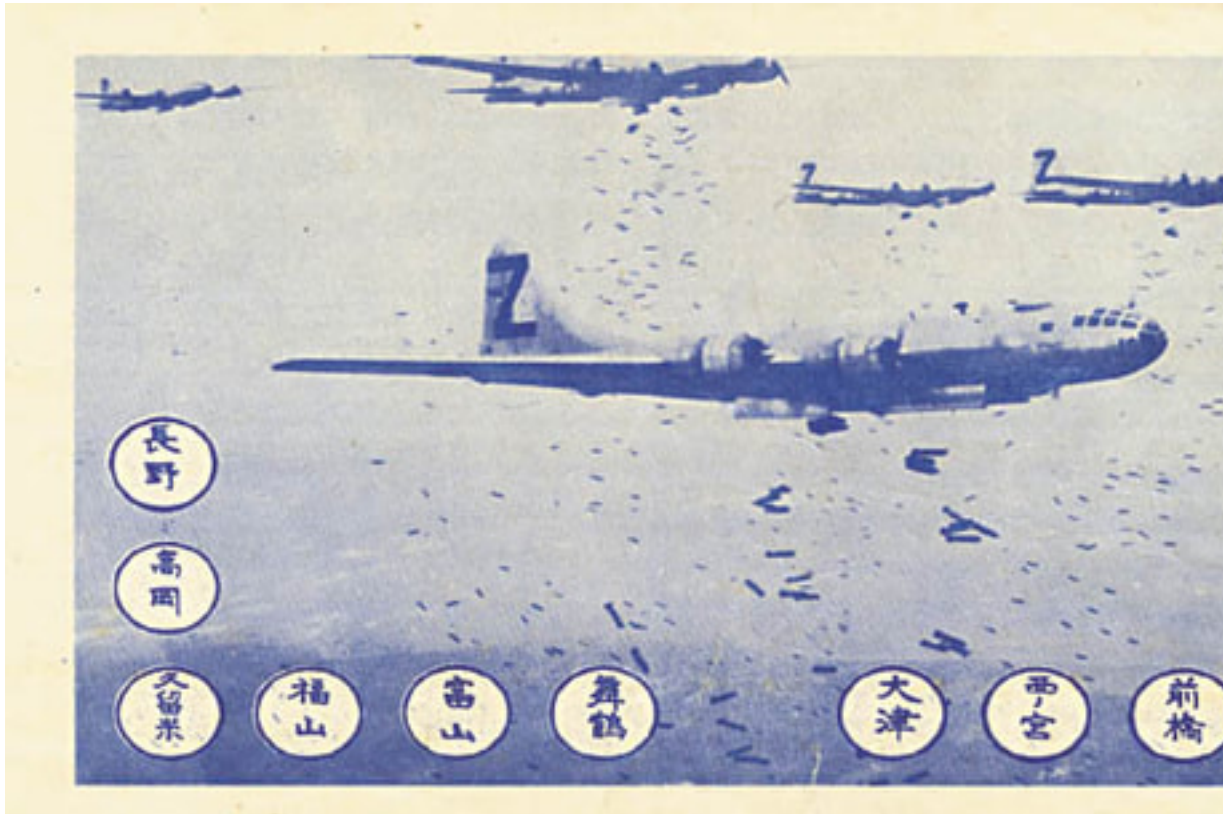

„The day the bomb dropped, (Oppenheimer) betrayed no hint of regret: Oppenheimer and his team were, in fact, jubilant. In the vast atomic compound at Los Alamos, they had gathered to celebrate the success of the bombing mission.

Oppenheimer made a triumphant entrance on to the stage, clasping his hands together like a prize-fighter while everybody cheered. His only regret, he said, was that they hadn't developed the bomb in time to use it against the Germans.

This apparently 'raised the roof'."Churchill was equally gratified. 'The whole burden of execution constitutes one of the greatest triumphs of American – or indeed human – genius,' he said.

*Sad story. Imagine bombing 100 000's of innocent civilians in big cities and people cheer.*

*Sounds like terrorism!*

## *Psychological Shock*

Better demonstrate what you know, e.g. over Tokyo Bay, where millions can watch ... and nobody gets hurt.

But in preparation for dropping an atomic bomb on Hiroshima, **US military leaders** decided *against* a demonstration bomb, and *against* a special leaflet warning, in both cases because of the uncertainty of a successful detonation, and the wish to maximize **psychological shock**.

No warning was given to Hiroshima that a new and much more destructive bomb was going to be dropped.

US terrorist napalm bombing leaflet – what would a Japanese do reading it?

*Japan is a nice Country ...  
and no atomic Bombs exploded there*

**I worked** spring 1972 – autumn 1976 and lived at Yokohama on the Bluff with a great view of Tokyo Bay to the south and Mount Fuji to the west. Two of my colleagues were children at Hiroshima and Nagasaki 1945. They never experienced any atomic bombings.

Just conventional B-29 napalm carpet terror bombings! Japan was occupied by USA until 1952 and censorship and propaganda produced the ridiculous falsifications of history known as the atomic bombs. What Japanese children really experienced 1945 was ignored and overlooked. Grown up Japanese were just told to shut up and believe the US propaganda nonsense.

*Atomic Bomb Testing ... by underpaid,  
summer working, American and British  
Students.*

But wasn't the atomic bomb tested at **Alamogordo, NM, USA July 16, 1945** as reported by **L. R. GROVES**, Major General, USA? Whatever was tested in New Mexico that day you can read about in the ridiculous test report **Trinity** written by a Mr. K. T. Bainbridge.

It was not the bomb described above. The report is simply a joke like the 18 low quality, stupid *References* made before and after the alleged July 16th Nuclear Explosion, by authors some

of which later became physics university professors or Nobel prize winners (sic) that could never explain how an atomic bomb actually worked (due to national security reasons):

1. **R. W. Carlson** “Confinement of an Explosion by a Steel Vessel,” Los Alamos Scientific Laboratory report LA-XXI (September 1945). 2. **J. H. Manley** “July 16th Nuclear Explosion: Micro-Barograph Pressure Measurement,” Los Alamos Scientific Laboratory report LA-360 (September 1945).

3. **J. L. McKibben** “July 16th Nuclear Explosion: Relating Timing,” Los Alamos Scientific Laboratory report LA-435 (1947).

4. **E. W. Titterton** „July 16th Nuclear Explosion: Fast Electronic Timing Sequence,” Los Alamos Scientific Laboratory report LA-436 (April 1946). (... he (E.W. Titterton) gained fame as having ‚pushed the button’ to initiate the first atomic bomb test at Alamogordo, the consequences of his time at Los Alamos were more profound.

It made him a member of an old boys’ network of virtually every leading nuclear physicist, both experimental and theoretical, in the Western world. Most of them had lived and worked in an isolated, close knit community for a number of years. ...).

5. **H. A. Bethe**, Ed., “Los Alamos Technical Series. Vol. 7 ‘Blast Wave,’ Part I (Chaps. 1-4),” Los Alamos Scientific Laboratory report LA-1020 (August 1947). (... Bethe was skeptical of the possibility of making a nuclear weapon from uranium. In the late 1930s, he wrote a theoretical paper arguing against fission, but was convinced by Teller to join the Manhattan Project.

When Oppenheimer was put in charge of forming a **secret** weapons design laboratory, Los Alamos, he appointed Bethe Director of the Theoretical Division, a move that irked Teller, who had coveted the job for himself. Bethe’s work at Los Alamos included calculating the critical mass of uranium-235 and the multiplication of nuclear fission in an exploding atomic

bomb. ...)

6. **Ernest D. Klema**, “July 16th Nuclear Explosion: Fast-Neutron Measurements Using Sulfur as the Detector,” Los Alamos Scientific Laboratory report LA-361 (October 1945).

7. **Ernest D. Klema**, “July 16th Nuclear Explosion: Neutron Measurements with Gold-Foil Detectors,” Los Alamos Scientific Laboratory report LA-362 (October 1945).

8. **R. Bellman and R. E. Marshak** “Distribution Arising from a Point Source of Fast Neutrons between Two Slowing-Down Media,” Los Alamos Scientific Laboratory report LA-257 (April 1945). (**Marshak** received his PhD from Cornell University in 1939. Along with his thesis advisor, Hans Bethe, he discovered many of the fusion aspects involved in star formation. This helped him on his work for the Manhattan Project, in Los Alamos, during World War II.)

9. **R. E. Marshak** “July 16th Nuclear Explosion: Soil Correction, Absorption of Neutrons in Soil, and Time Dependence of Slow-Neutron Intensity.” Los Alamos Scientific Laboratory report LA-358 (January 1946).

10. **J. Hirschfelder, R. Kamm, J. L. Magee, and N. Sugarman** „Fate of the Active Material After a Nuclear Explosion,” Los Alamos Scientific Laboratory report LA-277 (August 1945).

11. **P. Aegersold and P. B. Moon** “July 16th Nuclear Explosion: Radiation Survey of Trinity Site Four Weeks After Explosion,” Los Alamos Scientific Laboratory report LA-359 (September 1945). (Dr. Aegersold was at t Los Alamos to assist in the health problems in connection with the atomic bomb test.

He participated in protection of personnel during the assembling and testing of the bomb and made extensive radiation measurements after the test. 24 hours after the

alleged explosion, you could visit the site without risk. During World War II **P. B. Moon** was part of the MAUD Committee that confirmed the feasibility of an atomic bomb and then became part of the British delegation to the Manhattan Project, where amongst other things he did work on designing instrumentation for measuring the eventual bomb test).

12. **D. Williams and P. Yuster** “July 16th Nuclear Explosion: Total Radiation,” Los Alamos Scientific Laboratory report LA-353 (August 1945).

13. **J. E. Mack and F. Geiger** Los Alamos Scientific Laboratory, personal communication.

14. **F. Reines and W. G. Marley** “July 16th Nuclear Explosion: Incendiary Effects of Radiation,” Los Alamos Scientific Laboratory report LA-364 (1945).

15. **I. Halpern and P. B. Moon**, “July 16th Nuclear Explosion: Attempt to Obtain Gamma-Ray Kinephotographs,” Los Alamos Scientific Laboratory report LA-430 (November 1945).

16. **J. E. Mack**, “July 16th Nuclear Explosion: Space-Time Relationships,” Los Alamos Scientific Laboratory report LA-531 (April 1946).

17. **J. E. Mack** “Semi-Popular Motion Picture Record of the Trinity Explosion,” Los Alamos Scientific Laboratory” report LAMS-373 (April 1946).

18. **J. Blair, D. Frisch, and S. Katcoff**, “Detection of Nuclear-Explosion Dust in the Atmosphere,” Los Alamos Scientific Laboratory report LA-418 (October 1945).

## *No scientific Evidence that an atomic Device can explode ...*

There is no **scientific** evidence anywhere in above reports or anywhere by any Nobel Prize winners that an atomic device of any kind exploded in New Mexico July 16, 1945 due to

mechanical, compressive contact! The Los Alamos Scientific Laboratory was just a military camp to produce disinformation in war by underpaid physicists and students. Who invented the above ,bomb' is not known. Some student?

Basic physics in a civilian laboratory on the other hand confirms that an atomic bomb does not work at all. **Prove me wrong** and win €1 000 000:- . Reason is very simple. **The free neutrons released at fission are too fast and cannot fission another atomic.** A free neutron can only fission another atomic in a peaceful atomic power plant after being moderated, i.e. slowed down. You cannot moderate or slow down free neutrons in an atomic bomb.

The stupid US 3 meters long thing right never even existed except as an empty dummy on fake photos! I know there are 1 000's of web sites, e.g. **this one**, and **this one**, and **this one**, suggesting the atomic bomb works but ... they all produce false info and propaganda. It is a very lucrative business paid for by ignorant tax payers.

And any country can become an atomic bomb power! Just say you have the bomb. It doesn't cost much. Any **underpaid nuclear physicist** will agree to anything for a pay rise (as happened at Los Alamos in New Mexico, 1945).

*Pantex Plant atomic bomb making factory at Amarillo, Texas, USA – **Source** – where nobody seems to work.*

<https://ancientmystery.weebly.com/hiroshima--nagasaki.html>

And the other atomic bomb powers and their ,*experts*' will not say anything. National, military security reasons, you know! You have to be politically correct! Today, 2012, all US atomic bombs are allegedly manufactured at the **Pantex Plant**, at Amarillo, TX, USA.

It is a strange place (right) in the middle of nowhere ... where nobody but well paid guards work!

So maybe the USA is neither producing new, nor deactivating old atomic bombs? Isn't it good news!

Luckily fission works only in peaceful, nuclear power plants and in civilian laboratories due to moderated **free neutrons**.

## *Only Risk is Overheating and Melting of the Metal and Surroundings*

Pantex Plant atomic bomb making factory at Amarillo, Texas, USA – **Source** – where nobody seems to work.

In a power plant the uranium **U-235** is in the form of an oxide (a molecule) where the **U-235** part may fission and produce heat under controlled forms. No **critical masses**!

No exponential chain reactions. It can never explode. Only risk is overheating of the environment due to lack of cooling water Fukushima style.

Then the reactor enclosure will burst and its bottom may drop out (melt) and some radioactive elements will leak out.

Safety then is simply to ensure that cooling water is always

available and that the bottoms of the reactors are STRONG. Quite simple actually. You should wonder why the Pantex Plant atomic bomb factory built a sports field in the middle of nowhere (right). Maybe because nobody has ever run there?

## *Atomic Bomb XI*

<https://ancientmystery.weebly.com/hiroshima--nagasaki.html>

***An exponential Chain Reaction is not possible.***

In a civilian laboratory like **SCK-CEN** any heavy, radioactive, dangerous element can be bombarded by **free neutrons** and split into less hazardous, lighter elements as in normal fission,

but you need to apply external energy for the fission.

A **uranium-235 (U-235)** exponential chain reaction is not possible. The atomic bomb doesn't work. Just ask **SCK-CEN**. Congratulations, Iran! Your bomb will never work! Sorry, Israel! Your bomb doesn't work.

**Safety at Sea** is more complex! But there are ,*experts*' there too to produce **false scientific reports!**

***Iran could make the bomb within 10 months: experts:***

„Iran could produce enough weapons-grade uranium (WGU) to make an atomic bomb within two to four months and then

would need an additional eight to 10 months to build the device, **experts** said Monday 8 October 2012.”

The **experts** are paid by the **Institute for Science and International Security** (ISIS), a non-profit, non-partisan institution dedicated to informing the public about science and policy issues affecting international security and the report is **IRAN'S EVOLVING BREAKOUT POTENTIAL** by William C. Witt, Christina Walrond, David Albright, and Houston Wood:

„The authors use one significant quantity (SQ), defined as 25 kilograms of WGU (Weapon Grade Uranium), to represent the amount of WGU needed for a nuclear weapon. ... Currently, ISIS assesses that Iran would require at least 2-4 months to produce one SQ of WGU at the Natanz Fuel Enrichment Plant and would need to utilize its stocks of 3.5 and near 20 percent LEU.

The quickest estimates are 2 to 2.3 months, and they rely on an amount of near 20 percent LEU hexafluoride that was scheduled for conversion to another form as of August 2012. Growth in the stock of near 20 percent LEU reduces the time needed to break out, even though this stock is not currently large enough on its own to produce one SQ.”

ISIS thinks Iran can produce an atomic bomb within 10 months and has apparently not read my article above why an atomic bomb doesn't work.

**Why this web page?**

**It is very easy to manipulate people to believe in many things apart from atomic bombs.**

**E.g. moon travel, 911 global collapses, RMS Titanic 1912 sinking, etc, etc.**

**I believed in moon travel 1969 and in the stories about Titanic colliding with an ice berg, when I was a young man. Later, much later, I know better and how I was misled and lied to.**

**Me and the atomic Bomb** I am a child of the Cold War and the **atomic Bomb**. My family and I lived in the capital.

When I was seven years old, the government told us that the capital and us could be wiped out by an **atomic bomb** dropped by a big country to the east and that we should be prepared. In the telephone book was info what to do, when being wiped out by an **atomic bomb**.

Those who had no telephone or telephone book could read about it in brochures about the same thing. At school we were told to be prepared. My father was terrified. He immediately booked tickets to go to New Zealand by ship for us and bought a house 30 kilometers outside the capital.

**Atomic bombs** were regularly tested at Novaya Zemlya in the northeast and clouds of atomic radiation dust swept in over us, we were told. By chance the embassy of the country testing atomic bombs at Novaya Zemlya was just on the other side of our backyard fence, so it could be concluded that no **atomic bomb** would be dropped in our backyard.

My mother speaking the language of our neighbors thought so. Do not worry, she said! 1956 there were problems in Hungary and demonstrations took place outside our neighbor's embassy and I could not get home. Police chased everybody away. But I live there, I said, and pointed ... to the house at the side. Then I realized that the world maybe wasn't what I thought.

My country had a big navy and I worked for it for a while. Military service! The biggest naval shipyard was in the center of the capital and probably the target of the **atomic bomb**. I started to work there 1966. Later the whole shipyard moved underground in an **atomic bomb** proof shelter a little south of the capital. Imagine that.

A whole shipyard inside a mountain! I worked there 1970. It looked safe. You walked down through a long tunnel with double, **atomic bomb** proof doors and inside the mountain was our office, workshops, store rooms, dry docks, everything. James Bond ++! Amazing.

Evidently I believed in **atomic bombs**, then. In the navy we were taught how to protect us against ABC – Atomic, Biological, Chemical – warfare. If you didn't follow and obeyed orders you were shot! In war. In peace you had to stay 48 hrs in a prison cell.

My father had, unhappily, made his military service in the infantry during WW2. Like most of our family. If you are going to die for your country, it must be on the muddy, shitty potato fields of glory, they thought. I had other ideas. The sea! And not to drown!

All children had to be tested two days for military service and I was prepared. First day was a lot of tests, physical, intelligence, etc, and second day interviews and decisions. Most children were sent to infantry unless they were not social at all and had been sent to sea at 13 ... then you were navy. I was taken aside and asked what kind of military service I had planned to do.

Special services navy, I said. I assumed the military selection board must have been impressed by my IQ 200 score in the tests the day before. How I achieved it is another story. Nobody evidently has IQ 200!

I dutifully made my military, navy service and then ... I couldn't get a job in my dear country. So I moved away ... and there we are today. Isn't life full of surprises? I have learnt a lot since then, so

**the 911 WTC destructions at NY 2001 didn't fool me.**

The **Islamic republic dictatorship** (of Iran) stresses since 34 years, i.e. from 1979, that its nuclear program that started already in the 1950's assisted by the USA is for *peaceful* purposes only, i.e. power generation and medical work, etc.

The five members of the UN Security Council, the 5 – USA, Russia, France, United Kingdom and China (all saying they have working atomic bombs – which isn't true, they are all fakes) – and the IAEA (that only deals with civilian, peaceful atomic energy and cannot prove that atomic bombs work – I have asked!) suggest the opposite today. They suggest the Islamic republic dictatorship is planning to build a *fake*, atomic bomb using enriched uranium U235.

The Islamic republic dictatorship headed by Ali Khamenei, supreme leader of the revolution to establish an islamic dictatorship, is against all types of weapons of mass destruction, WMDs, i.e. biological, chemical and nuclear and

has signed all international conventions in this respect. The Islamic republic dictatorship should therefore make PR for this web page. But it doesn't. It seems the Islamic republic dictatorship likes to obtain a *fake* atomic bomb.

November 2013 the 5+1 (Germany) all meet the Islamic republic dictatorship at Geneva, Switzerland, to sort out the matter with IAEA looking on. The Iran delegation is headed by Mohammad Javad Zarif, MJZ. MJZ and all the others evidently know that atomic bombs do not function but that *fake* (non-working) atomic bombs make your penis grow 500% and impress stupid people.

So MJZ will talk and talk ... so that Iran can say it has a *fake* atomic bomb. And USA, Russia, France, United Kingdom and China will not say much as they already has *fake* atomic bombs. Strange thing is Germany. The have no *fake* atomic bomb and does not want it. Why not say so?

The discussions at Geneva is whether Iran can enrich uranium to >20% U235 using its >19 000 centrifuges in order to produce a *fake* atomic bomb that requires 95% U235.

As seen in chart right you need a fair amount of energy (and centrifuges) to enrich to 5% U235 for a nuclear power plant, i.e. 900 SWU, less energy (and centrifuges) to 20% U235 for medical use, i.e.  $1\ 125 - 900 = 225$  SWU, and much less to 95% U235 (and only a few centrifuges) for your *fake* atomic bomb, i.e.  $1\ 300 - 1\ 125 = 175$  SWU.

The reason is that the mass of material being enriched progressively diminishes and requires less effort relative to what has already been applied before.

It is thus very easy to enrich from 20 to 95% U235 using some 100's of centrifuges out of >19 000 and impossible to verify by IAEA.

## Energy required to enrich uranium

Uranium enriched >20% U235 is useless except to enlarge your penis, and that's why the talks at Geneva cannot be finished early. USA, Russia, France, United Kingdom and China like their *fake* atomic bombs.

One problem is that Israel will bomb Iran, if Iran has a *fake* atomic bomb.

Of course Israel has only *fake* atomic bombs itself, so it will bomb Iran with chemical bombs. And maybe it is the whole idea of the show? Like USA bombed Hiroshima and Nagasaki in Japan 1945.

I also have a *fake* atomic bomb! I keep it in a bag! See below.

On 23 November 2013 an **agreement** was reached between the Islamic republic dictatorship and USA, Russia, France, United Kingdom, China and Germany at Geneva. IAEA is allowed to check the Iranian production of enriched U235 that will not exceed 5%, blah, blah. And the *fake* atomic bomb will live on.

***History is just repeating itself most of the time.***

***Don't worry!***

by **Anders Björkman**, M.Sc.

***"This is just my opinion, based on personal research, critical thinking and common sense since 1994.***

***Welcome to my long and popular web page about the scandals of fake atomic bombs, fake nuclear, deadly radiation, bad sciences and similar bullshit.***

***I assume you are afraid of nuclear wars and **nuclear*****

***weapons*** of mass destruction and atomic bombs exploding in a FLASH spreading death and radiation. You should be.

***It is a #1 priority of any US Presidents and Japanese prime ministers since 1945 to scare you. All fake since August 1945, though! The secret is that **nuclear weapons** cannot explode! It was very easy to fool the world 1945 that two atomic bombs had exploded. And it was quite easy to continue the hoax during the cold war until 1990. But not any longer.***

***Nuclear weapons*** are 100% US/USSR (Russia)/Japanese collusion, infringements, infractions, stupid propaganda, lies, pseudoscience or bad science and history fiction.

***It upsets many American and Japan State Boards of Education (or Indoctrination), SBOEs, that force teachers to tell pupils that US scientists and engineers top secretly (hm!) developed atomic bombs 1942/5 at enormous costs using the best brains in the world. It is a scandal that nobody wants to talk about today."***

## ***Other Anomalies About the Atomic Bomb***

"The original newspaper release was that Nagasaki and Hiroshima were fire bombed like Tokyo and it was only later that the story of the Abomb surfaced. All brick buildings were left standing, including the Bank of Japan which is still in use today. No residue "radiation" ..

[https://www.logicallyfallacious.com/tools/qa/Bo/LogicalFallacies/LDI6U5fe/Atom\\_bombs\\_do\\_not](https://www.logicallyfallacious.com/tools/qa/Bo/LogicalFallacies/LDI6U5fe/Atom_bombs_do_not)

"Major **Alexander P. de Seversky**, who 1945 inspected the bombed towns of Japan, testified:

*In Hiroshima I was prepared for radically different sights. But, to my surprise, **Hiroshima looked exactly like all the other burned-out cities in Japan.***

*There was a familiar pink blot, about two miles in diameter. It was dotted with charred trees and telephone poles. Only one of the cities twenty bridges was down. Hiroshima's clusters of modern buildings in the downtown section stood upright.*

*It was obvious that **the blast could NOT have been so powerful** as we had been led to believe. It was extensive blast rather than intensive.*

*I had heard of buildings instantly consumed by unprecedented heat. Yet here I saw the buildings structurally intact, and what is more, topped by undamaged flag poles, lightning rods, painted railings, air raid precaution signs and other comparatively fragile objects.*

*At the T-bridge, the aiming point for the atomic bomb, I looked for the "**bald spot**" where everything presumably had been **vaporized** in the twinkling of an eye. It **wasn't there** or anywhere else. I could find no traces of unusual phenomena."*

<https://www.flashnewsgroups.com/hoax/nuclear-hoax/index.htm>

"PS there was no reason to drop the two bombs on Hirshima and Nagasaki because Japan was ready to surrender. But the military industrial establishment that is now controlling the US wanted to see what the effect an atomic bomb have on humans!Nice people!"

## *Atom Bombs Do Not Work*

The original newspaper release was that Nagasaki and Hiroshima were fire bombed like Tokyo and it was only later that the story of the Abomb surfaced. All brick buildings were left standing, including the Bank of Japan which is still in use today. No residue "radiation"..

No Atom bombs have ever been used even during the Vietnam war where every other despicable weapon was used including chemicals. The USA lost this war.

No dictator or mad leaderr has ever used nuclear weapons.

All photos and film of atomic explosions are easily proven fake [mileswmthis.com/trinity..](http://mileswmthis.com/trinity..) . . .

Various scientists have shown the actual mechanics of an Abomb are not workable [heiwaco.tripod.com/bomb.h](http://heiwaco.tripod.com/bomb.h). . .

The Atomic bomb hoax was thought up by the USA, Russia and UK after WWII. Various other countries have been let into the hoax. The idea is to keep the masses in constant fear.

Not one single nuclear weapon large or small has ever been used. Logical conclusion: They don't work
